

EA-0063 - AQELYN Final Readiness and Market Leadership Blueprint

****Status:**** FULL_COMPLETE

****Purpose:**** Final architecture baseline audit, rebrand normalization, implementation authorization, and world-class product strategy.

1. Document Control

EA-0063 defines the final pre-implementation readiness, rebrand normalization, market leadership blueprint, and implementation authorization for the AQELYN Platform. It confirms that the architecture baseline is complete and ready for coding.

Engineering Requirements

- EA-0063-REQ-001: AQELYN shall preserve traceability to the architecture baseline.
- EA-0063-REQ-001A: AQELYN shall provide clear, evidence-based, user-understandable outputs.
- EA-0063-REQ-001B: AQELYN shall support enterprise and government-grade auditability.

2. Executive Summary

AQELYN is designed to become a world-class Cyber Intelligence Platform that helps customers, companies, and government organizations find security issues, understand them, prove them with evidence, and fix them safely. The system combines endpoint intelligence, identity governance, evidence, knowledge graph, AI explainability, policy, workflow automation, attack surface discovery, vulnerability intelligence, compliance, and mission control.

Engineering Requirements

- EA-0063-REQ-002: AQELYN shall preserve traceability to the architecture baseline.
- EA-0063-REQ-002A: AQELYN shall provide clear, evidence-based, user-understandable outputs.
- EA-0063-REQ-002B: AQELYN shall support enterprise and government-grade auditability.

3. Rebrand Decision

The public product and company brand is AQELYN. Project Sentinel is retired as a public-facing name. Historical Engineering Archive identifiers are preserved for traceability, but all current repository, documentation, product, and implementation references use AQELYN.

Engineering Requirements

- EA-0063-REQ-003: AQELYN shall preserve traceability to the architecture baseline.
- EA-0063-REQ-003A: AQELYN shall provide clear, evidence-based, user-understandable outputs.
- EA-0063-REQ-003B: AQELYN shall support enterprise and government-grade auditability.

4. Readiness Audit

The repository now contains the complete architecture baseline from EA-0001 through EA-0063. The fixed root hierarchy is present. START_HERE.md is present. Development standards, design system, AI engineering handbook, developer handbook, and engineering portal specifications are present. The project is implementation-ready.

Engineering Requirements

- EA-0063-REQ-004: AQELYN shall preserve traceability to the architecture baseline.
- EA-0063-REQ-004A: AQELYN shall provide clear, evidence-based, user-understandable outputs.
- EA-0063-REQ-004B: AQELYN shall support enterprise and government-grade auditability.

5. World-Class Product Goal

AQELYN shall aim to be the leading platform in its category by combining ease of use, evidence-first security, explainability, automation, privacy, enterprise scalability, government-grade auditability, and AI-assisted remediation. The goal is not to copy existing categories such as EDR, XDR, SIEM, SOAR, CAASM, or vulnerability management, but to unify their useful capabilities into a coherent Cyber Intelligence Platform.

Engineering Requirements

- EA-0063-REQ-005: AQELYN shall preserve traceability to the architecture baseline.
- EA-0063-REQ-005A: AQELYN shall provide clear, evidence-based, user-understandable outputs.
- EA-0063-REQ-005B: AQELYN shall support enterprise and government-grade auditability.

6. Unique Differentiators

AQELYN differentiates through: understandable findings, expert depth on demand, evidence before opinion, user-centered remediation, private and enterprise deployment modes, full traceability, engineering archive driven development, AI explanation guardrails, mission control for implementation, and a consistent design system.

Engineering Requirements

- EA-0063-REQ-006: AQELYN shall preserve traceability to the architecture baseline.
- EA-0063-REQ-006A: AQELYN shall provide clear, evidence-based, user-understandable outputs.
- EA-0063-REQ-006B: AQELYN shall support enterprise and government-grade auditability.

7. Customer Problem Model

AQELYN addresses common customer pain points: too many alerts, unclear technical language, lack of prioritization, missing evidence, tool fragmentation, manual remediation, weak visibility, unmanaged devices, unknown identities, compliance fatigue, and inability to explain risk to executives or non-technical users.

Engineering Requirements

- EA-0063-REQ-007: AQELYN shall preserve traceability to the architecture baseline.
- EA-0063-REQ-007A: AQELYN shall provide clear, evidence-based, user-understandable outputs.
- EA-0063-REQ-007B: AQELYN shall support enterprise and government-grade auditability.

8. Target Markets

AQELYN can serve home users, small businesses, managed service providers, enterprises, government agencies, regulated industries, education, healthcare, finance, and critical infrastructure. The same platform architecture supports local-only privacy mode and centralized enterprise cloud mode.

Engineering Requirements

- EA-0063-REQ-008: AQELYN shall preserve traceability to the architecture baseline.
- EA-0063-REQ-008A: AQELYN shall provide clear, evidence-based, user-understandable outputs.
- EA-0063-REQ-008B: AQELYN shall support enterprise and government-grade auditability.

9. Implementation Authorization

Implementation is authorized. Codex, Claude Code, Cursor, GitHub Copilot, and human developers shall begin with EA-0001 and follow the approved sequence. EA-0058 through EA-0063 are governance and implementation standards that must be consulted throughout development.

Engineering Requirements

- EA-0063-REQ-009: AQELYN shall preserve traceability to the architecture baseline.
- EA-0063-REQ-009A: AQELYN shall provide clear, evidence-based, user-understandable outputs.
- EA-0063-REQ-009B: AQELYN shall support enterprise and government-grade auditability.

10. Acceptance Criteria

The baseline is accepted when the repository uses AQELYN naming, contains EA-0001 through EA-0063, preserves the fixed hierarchy, includes START_HERE.md, contains no release ZIPs inside archive folders, includes manifest hashes, and provides a clear implementation path for Codex and Claude Code.

Engineering Requirements

- EA-0063-REQ-010: AQELYN shall preserve traceability to the architecture baseline.
- EA-0063-REQ-010A: AQELYN shall provide clear, evidence-based, user-understandable outputs.
- EA-0063-REQ-010B: AQELYN shall support enterprise and government-grade auditability.

Requirements Matrix

Requirement	Description	Verification
EA-0063-REQ-001	Rebrand baseline uses AQELYN	Repository audit
EA-0063-REQ-002	Implementation readiness confirmed	Readiness checklist
EA-0063-REQ-003	World-class product goals defined	Engineering review
EA-0063-REQ-004	Customer problem model documented	Product review
EA-0063-REQ-005	Codex and Claude Code implementation path clear	Developer review

Traceability Matrix

Source	Target	Evidence
Product Principles	UI/UX, AI, Reports	EA-0059, EA-0060
Coding Standards	Implementation	EA-0058
Developer Workflow	Codex/Claude Code	EA-0061, EA-0062
Final Readiness	Coding Start	START_HERE.md

Engineering Journal

EA-0063 was created to close the design and planning phase and authorize coding under the AQELYN brand. It adds final market leadership requirements and confirms that future enhancements must become new Engineering Archives rather than modifying the baseline.

Final Decision

AQELYN Platform Enterprise Architecture Baseline v1.0 is complete and ready for implementation.
