

PROJECT AQELYN

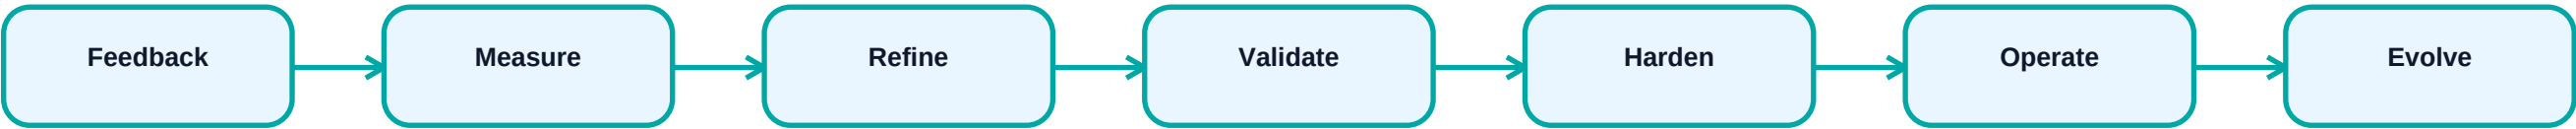

Cyber Security Operating Environment

Architecture Atlas: 25 high-clarity vector diagrams plus a color overview poster

1 01 - Master Engineering Roadmap

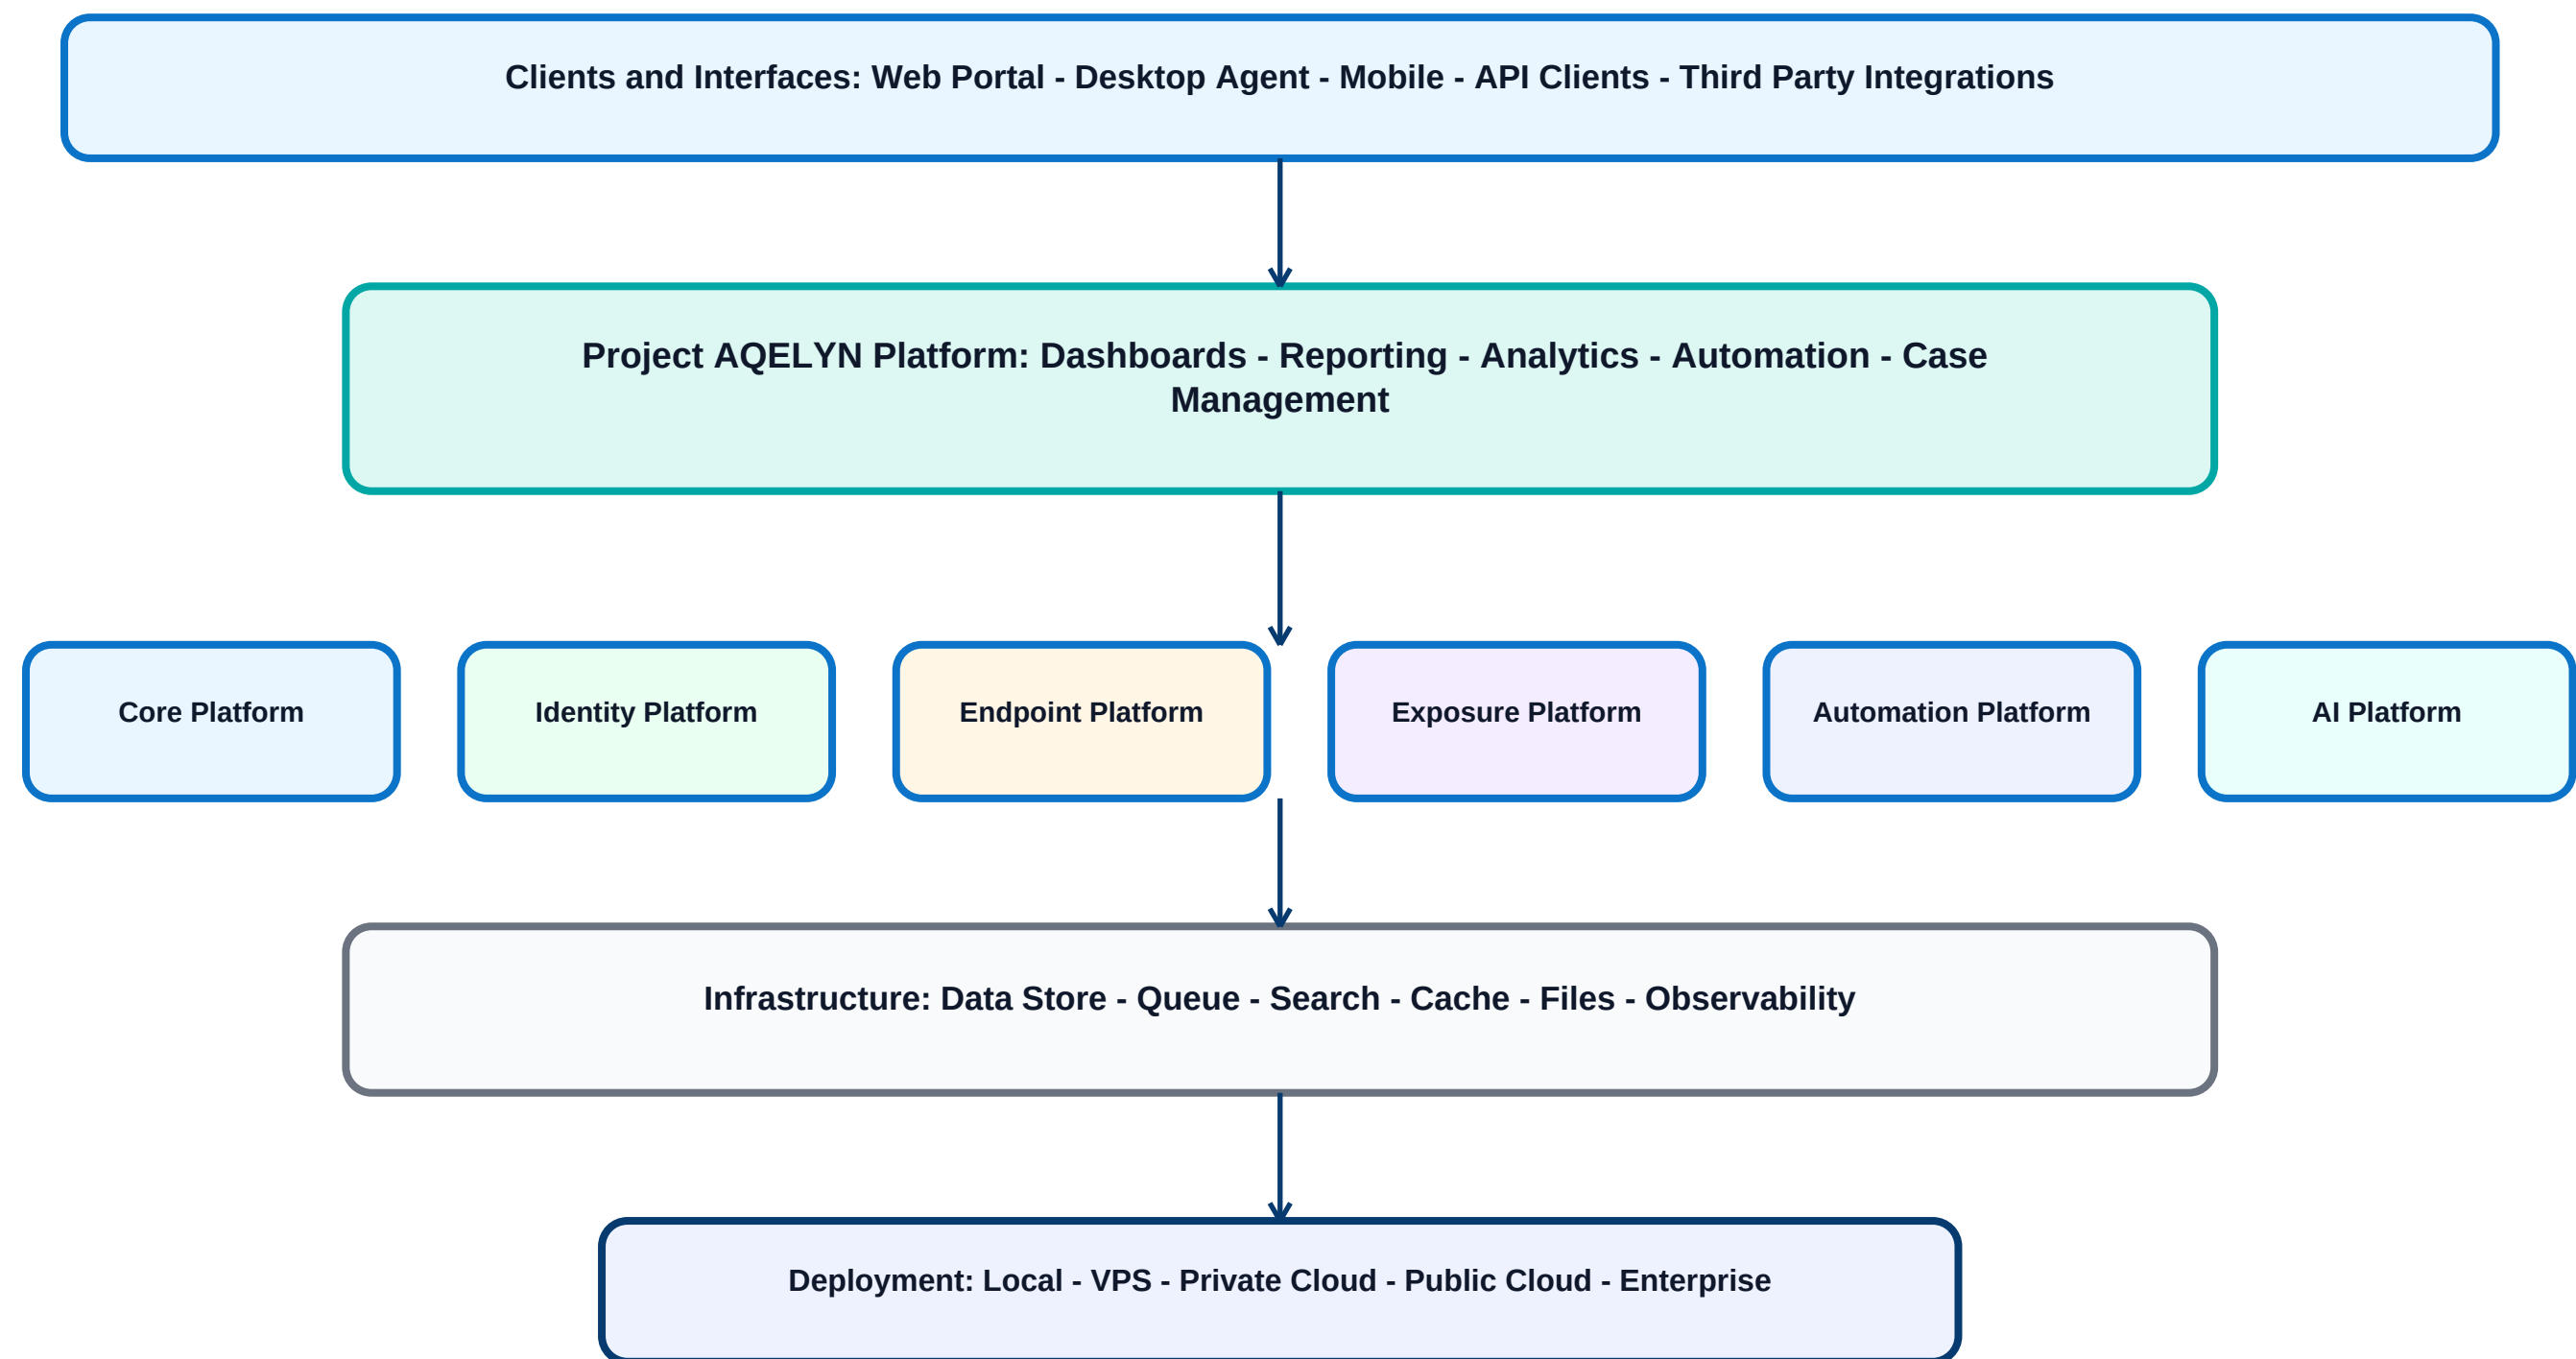

From project charter to production release with continuous improvement.

The complete lifecycle for building Project AQELYN.

2 02 - System Architecture Overview

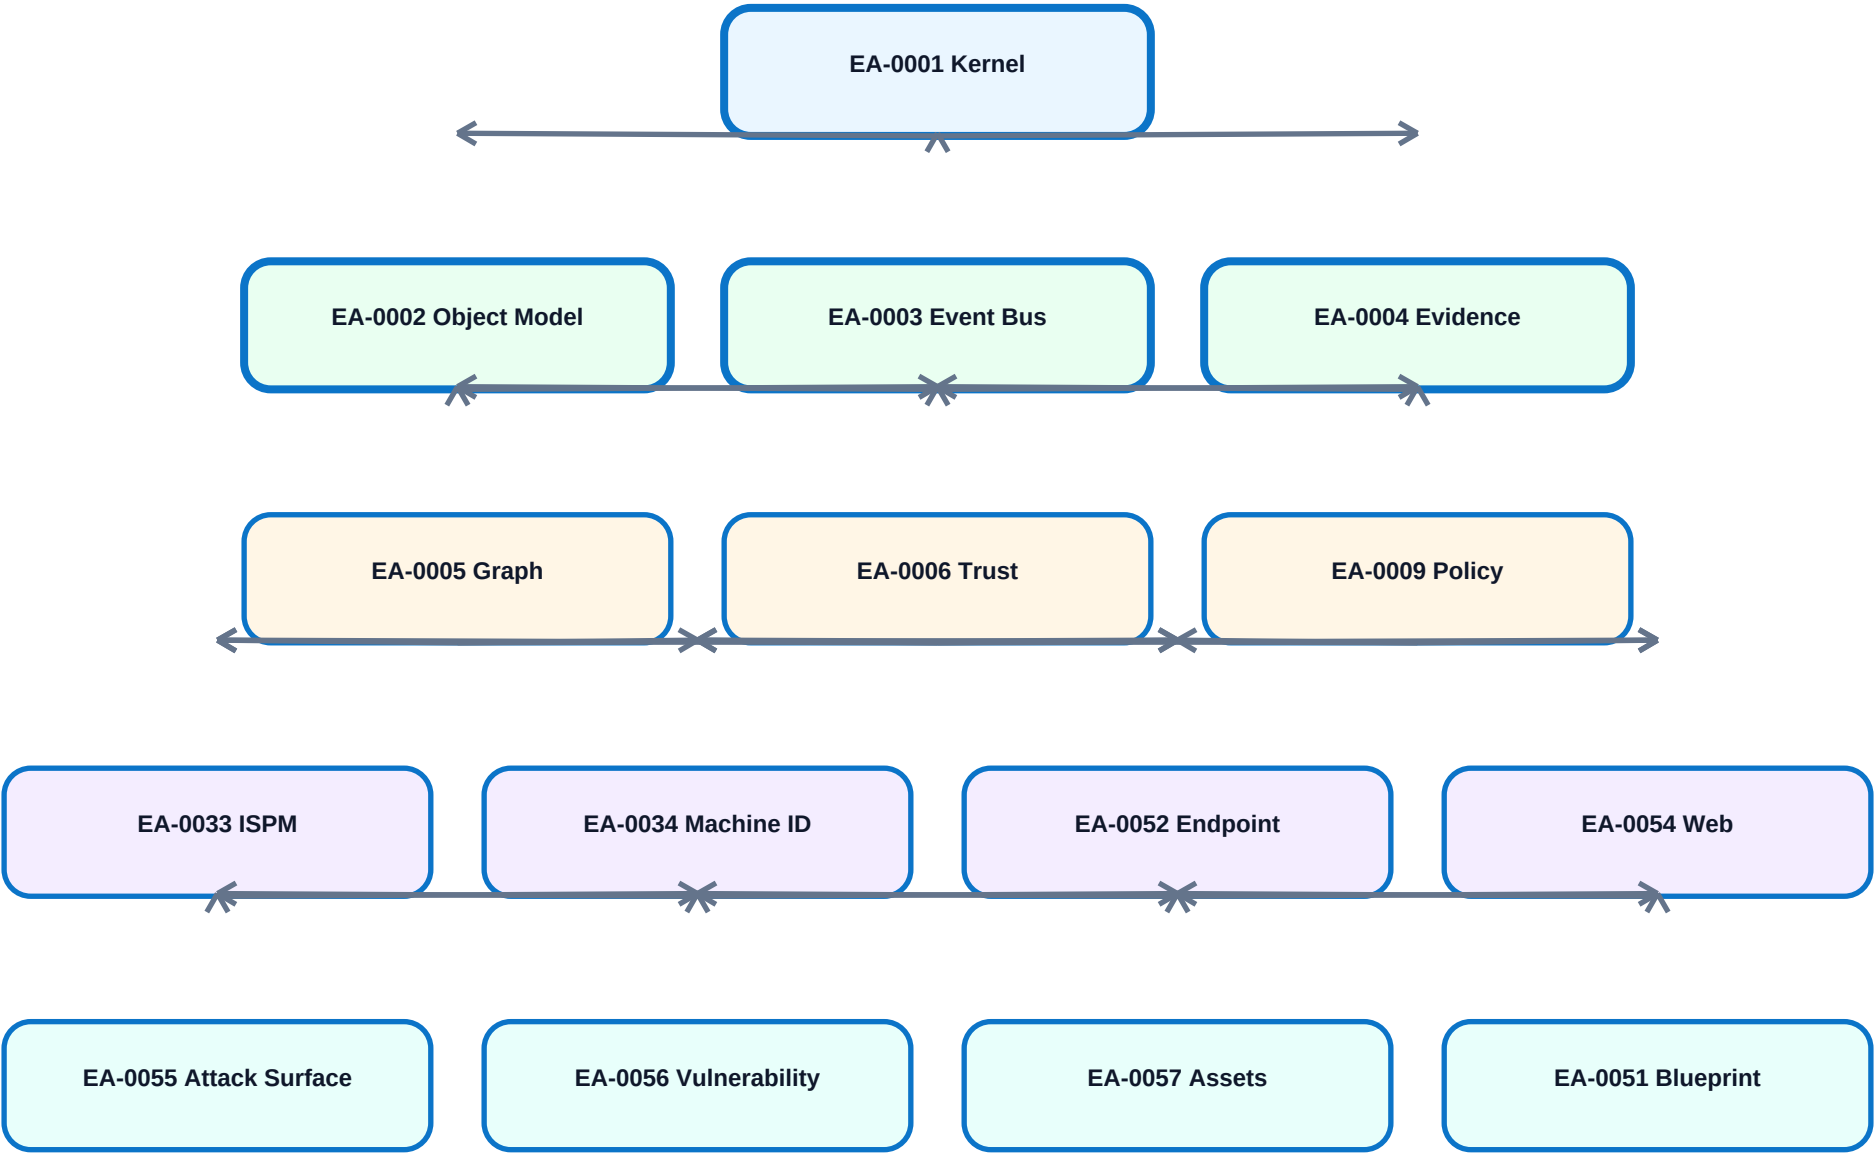

Layered view of user interfaces, platform engines, infrastructure, and deployment targets.

The platform is layered around core services, engine domains, and deployment environments.

303 - Engineering Archive Dependency Graph

High level dependency chain from core primitives to exposure and endpoint engines.

Shows how coding should respect foundational dependencies before advanced engines.

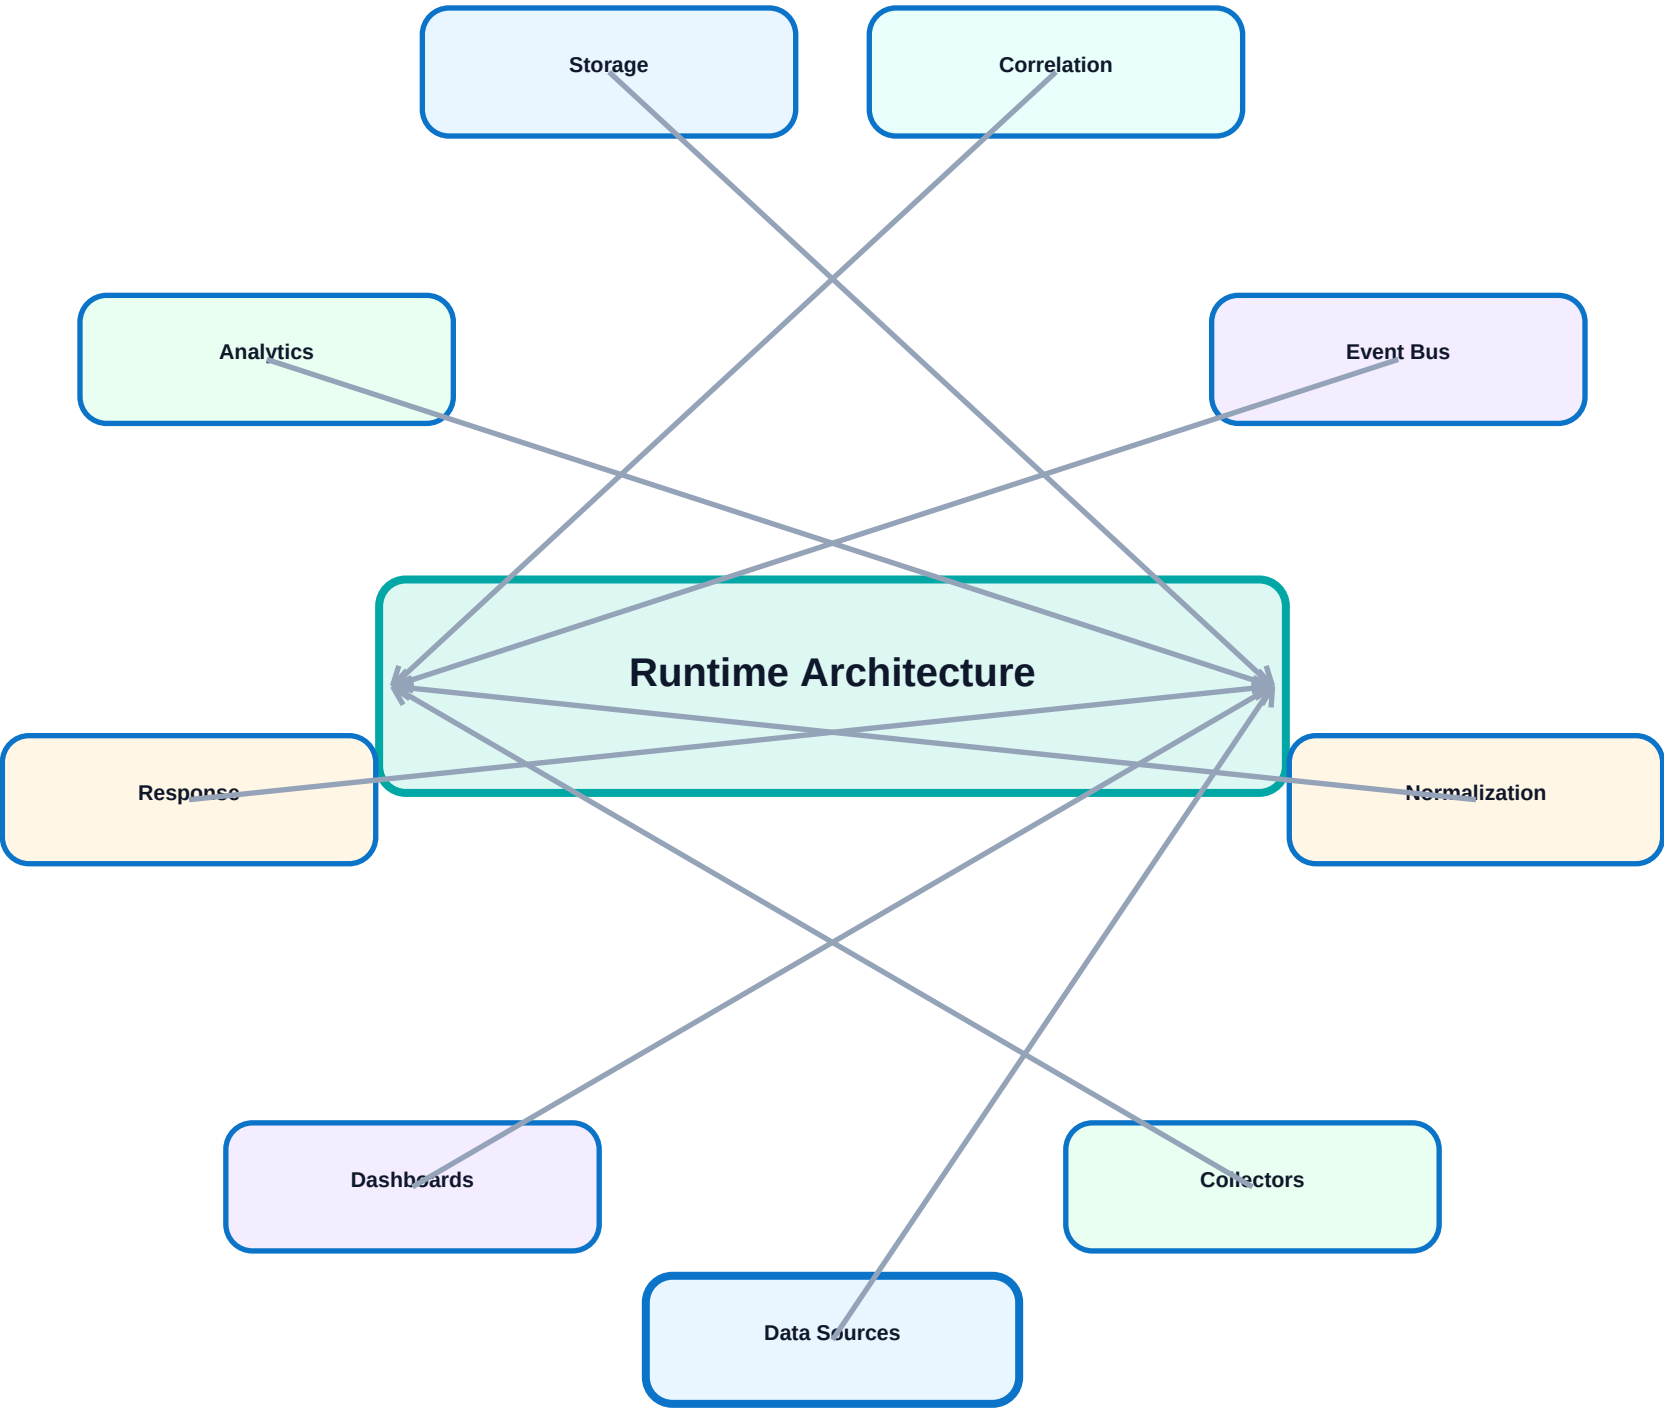

404 - Coding and Implementation Roadmap

Implementation milestones from C-001 foundation runtime to production productization.

Defines the safe order for coding the project.

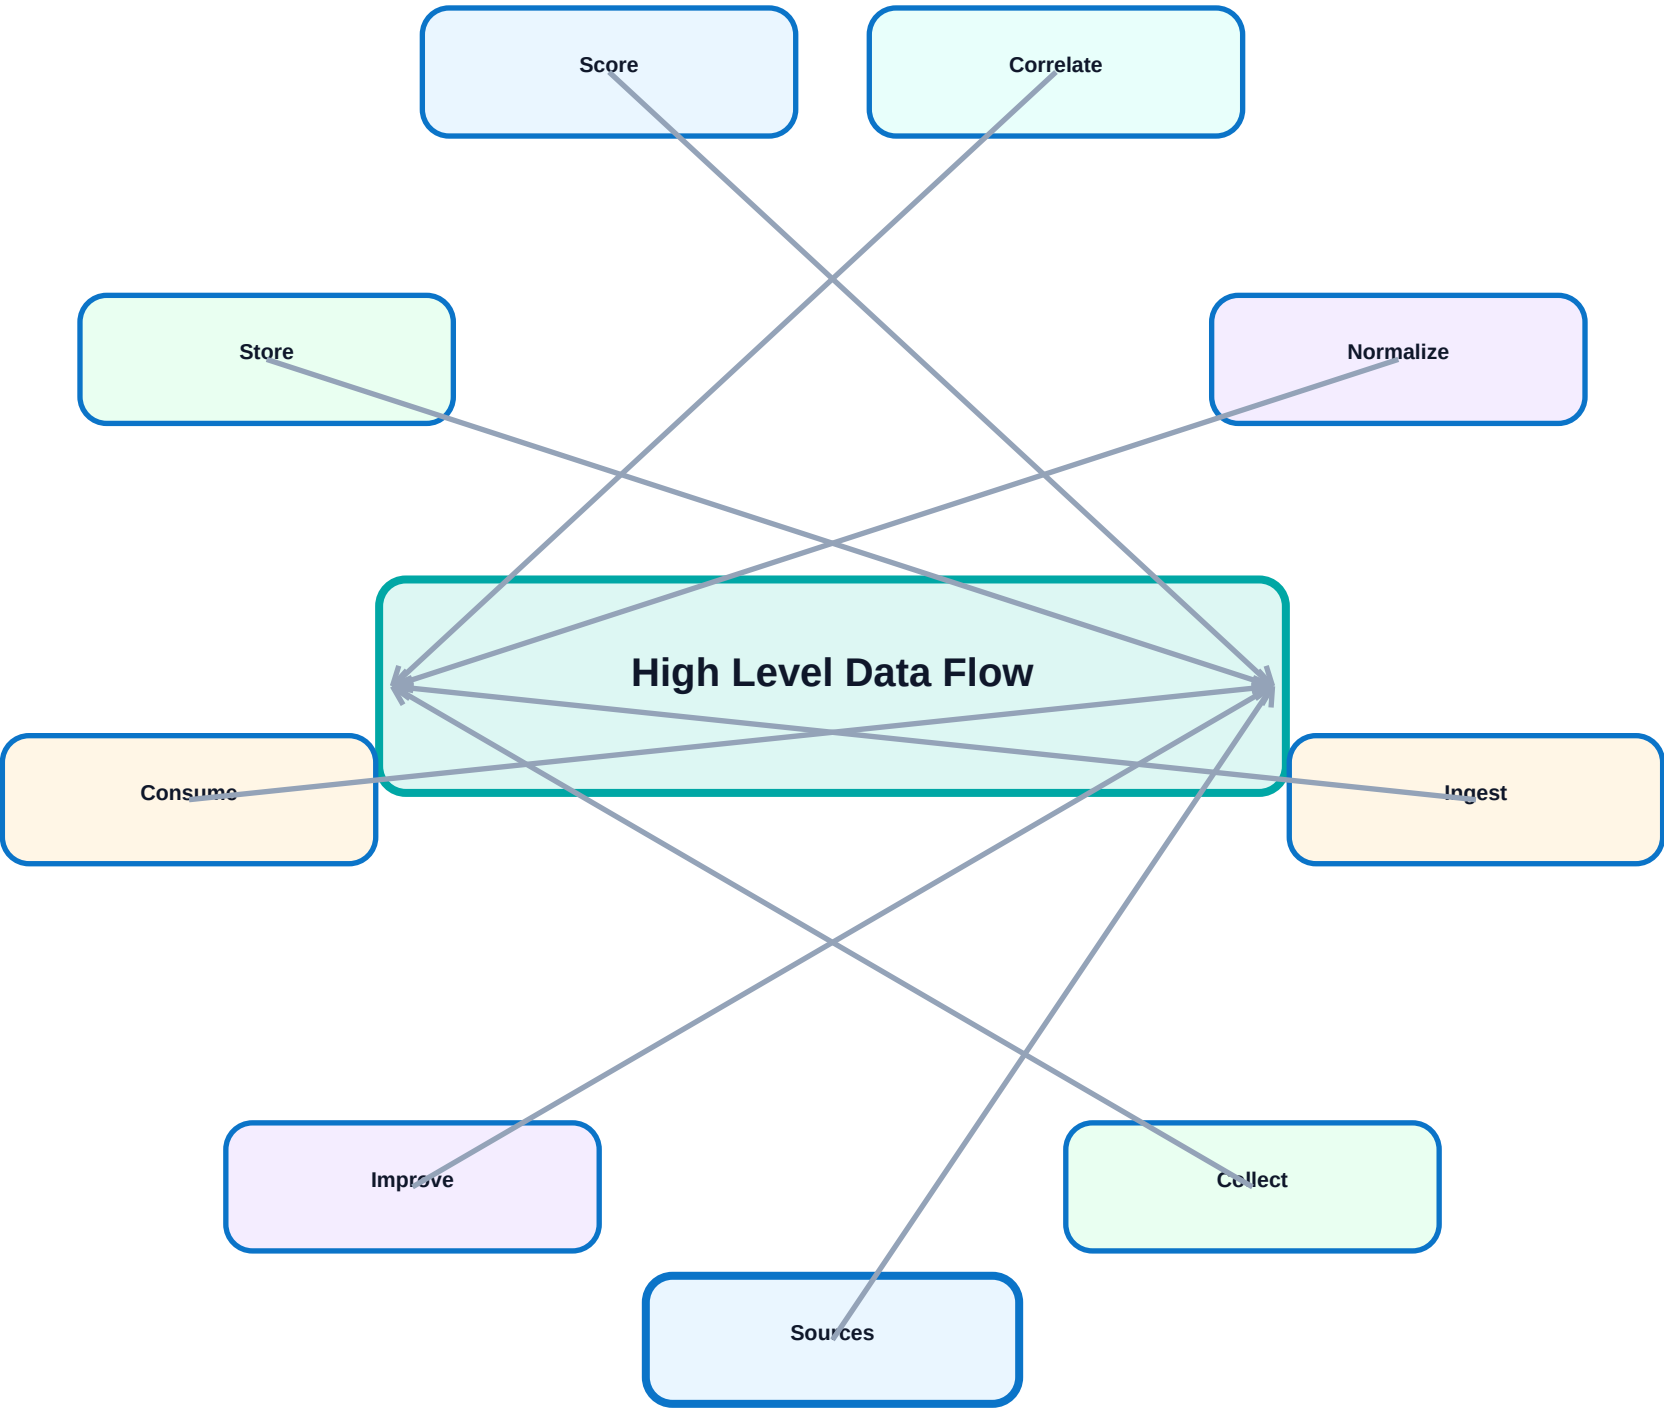

Runtime services, bus, storage, and consumers.

Runtime services, bus, storage, and consumers.

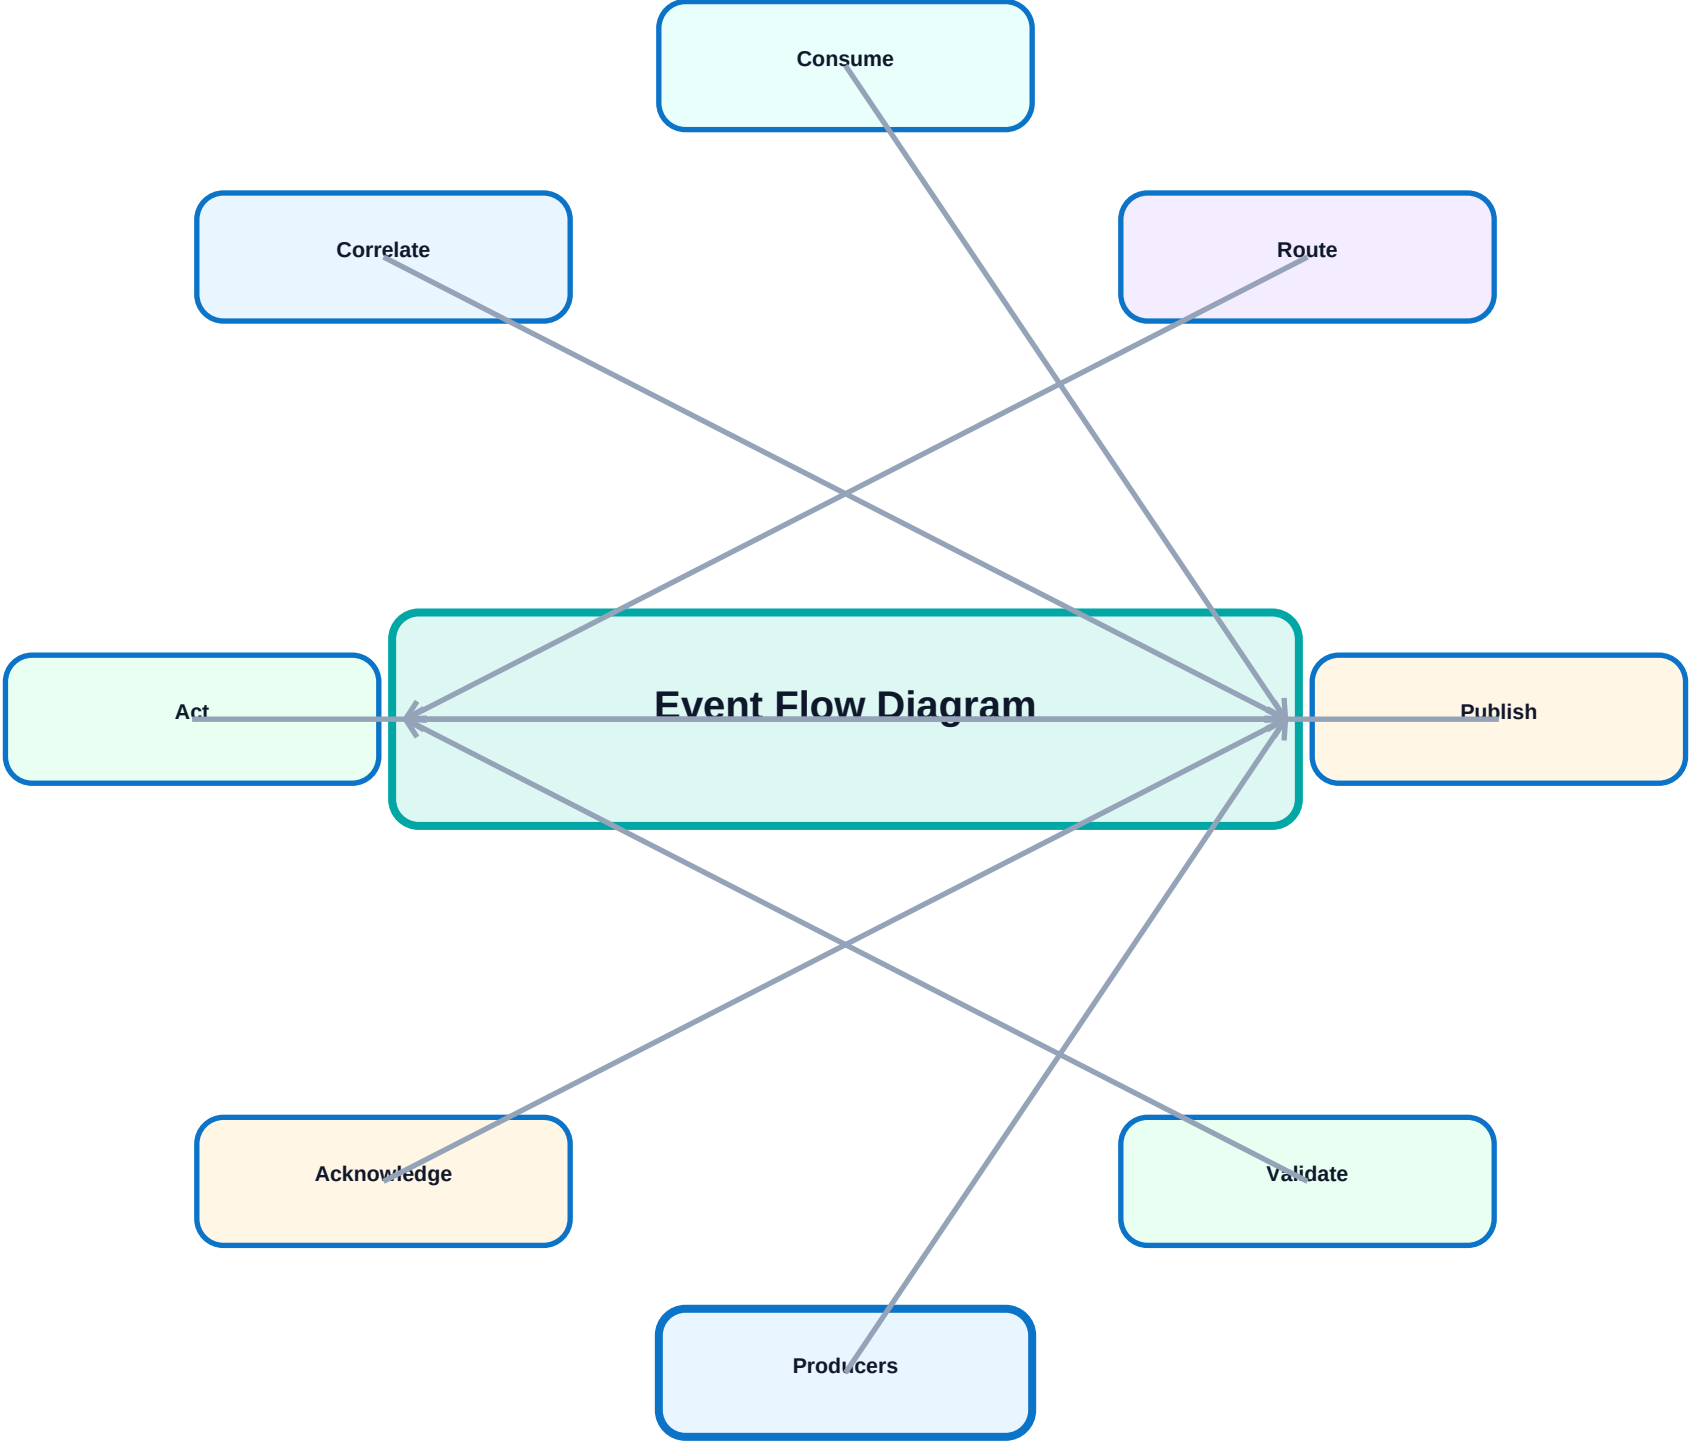

06 - High Level Data Flow

Collect, ingest, process, store, consume, and feedback loop.

Collect, ingest, process, store, consume, and feedback loop.

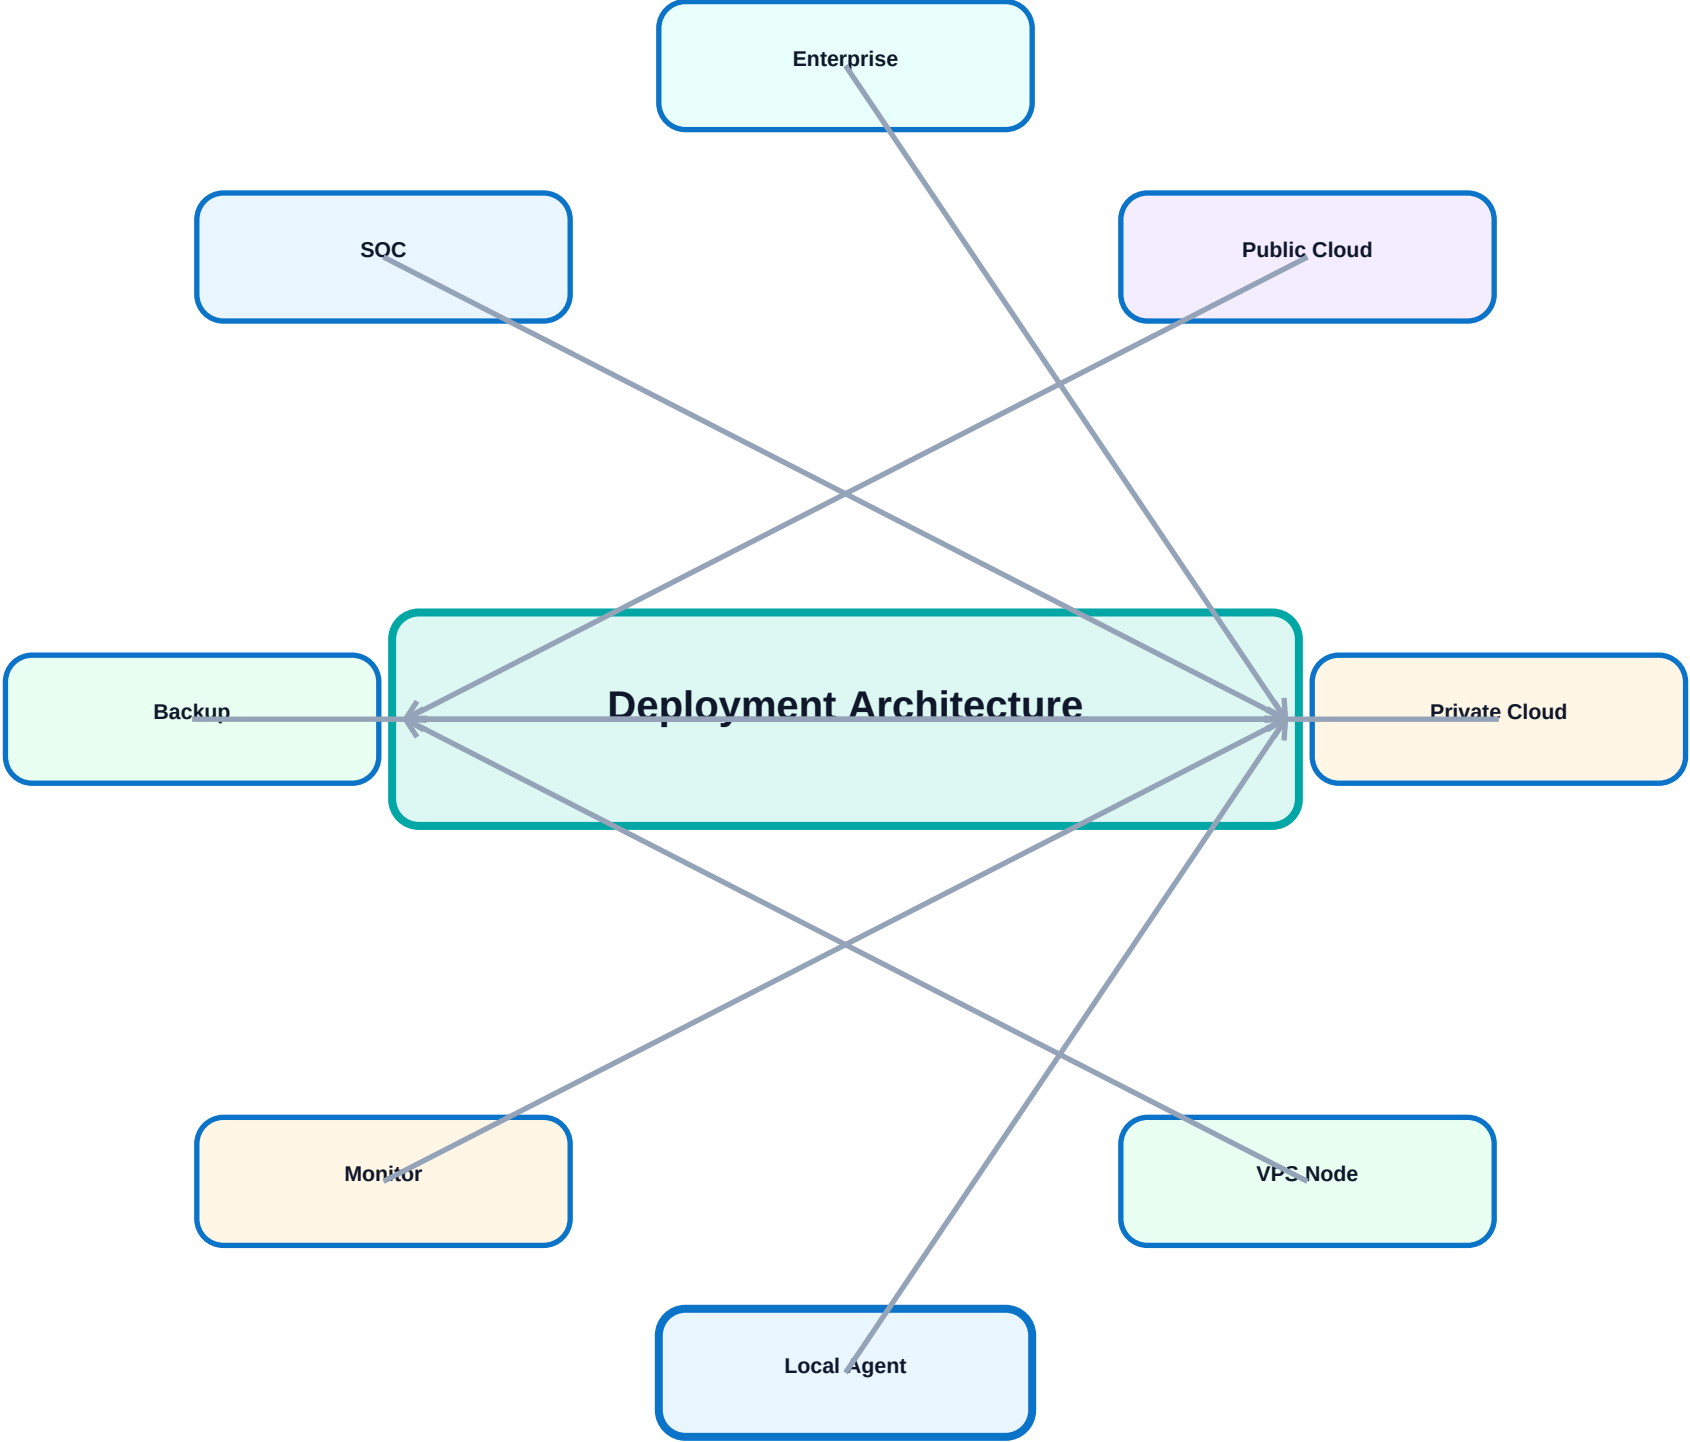

Event producers, event bus, consumers, actions, and feedback.

Event producers, event bus, consumers, actions, and feedback.

808 - Deployment Architecture

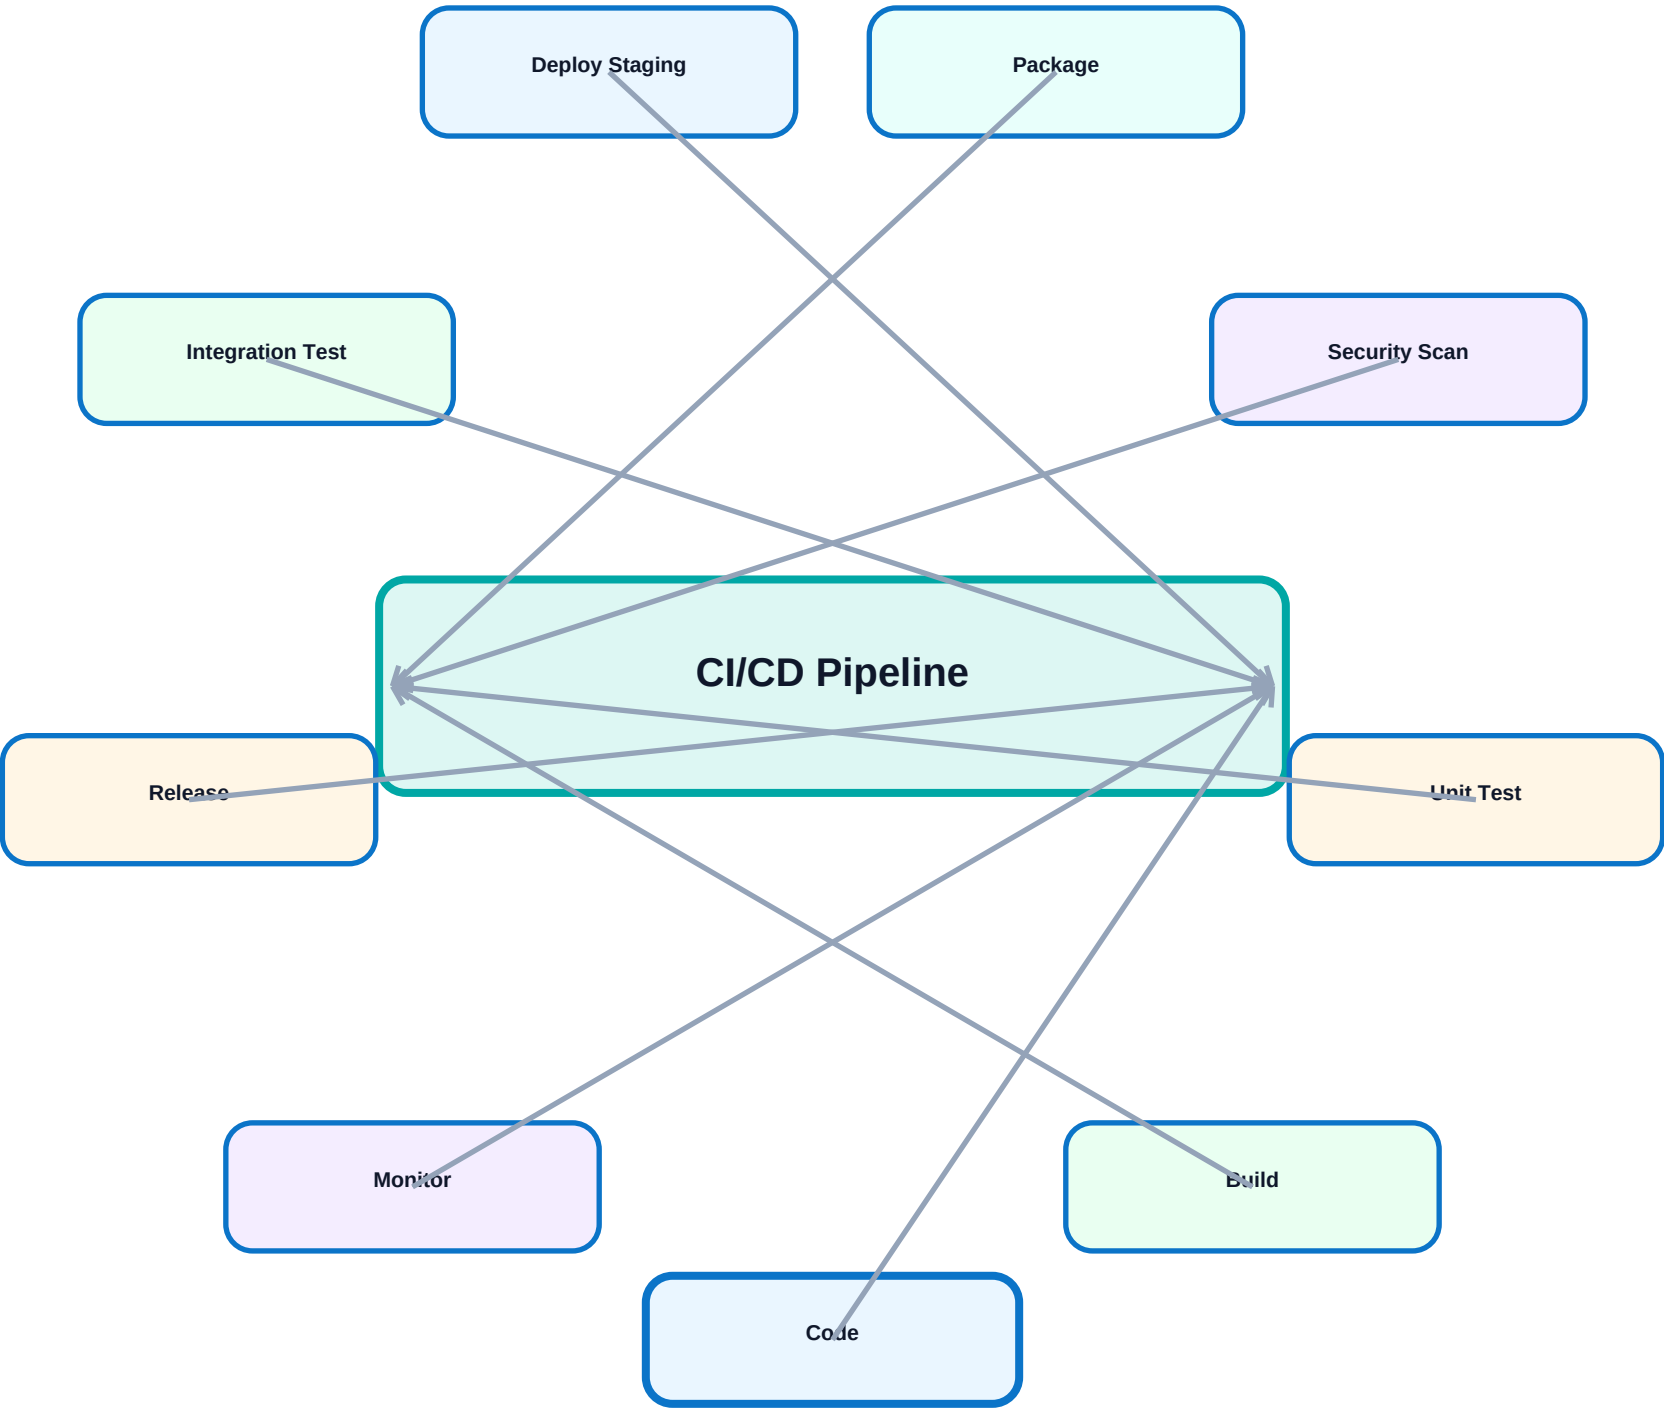

Local, VPS, private cloud, public cloud, and enterprise deployment modes.

Local, VPS, private cloud, public cloud, and enterprise deployment modes.

09 - CI/CD Pipeline

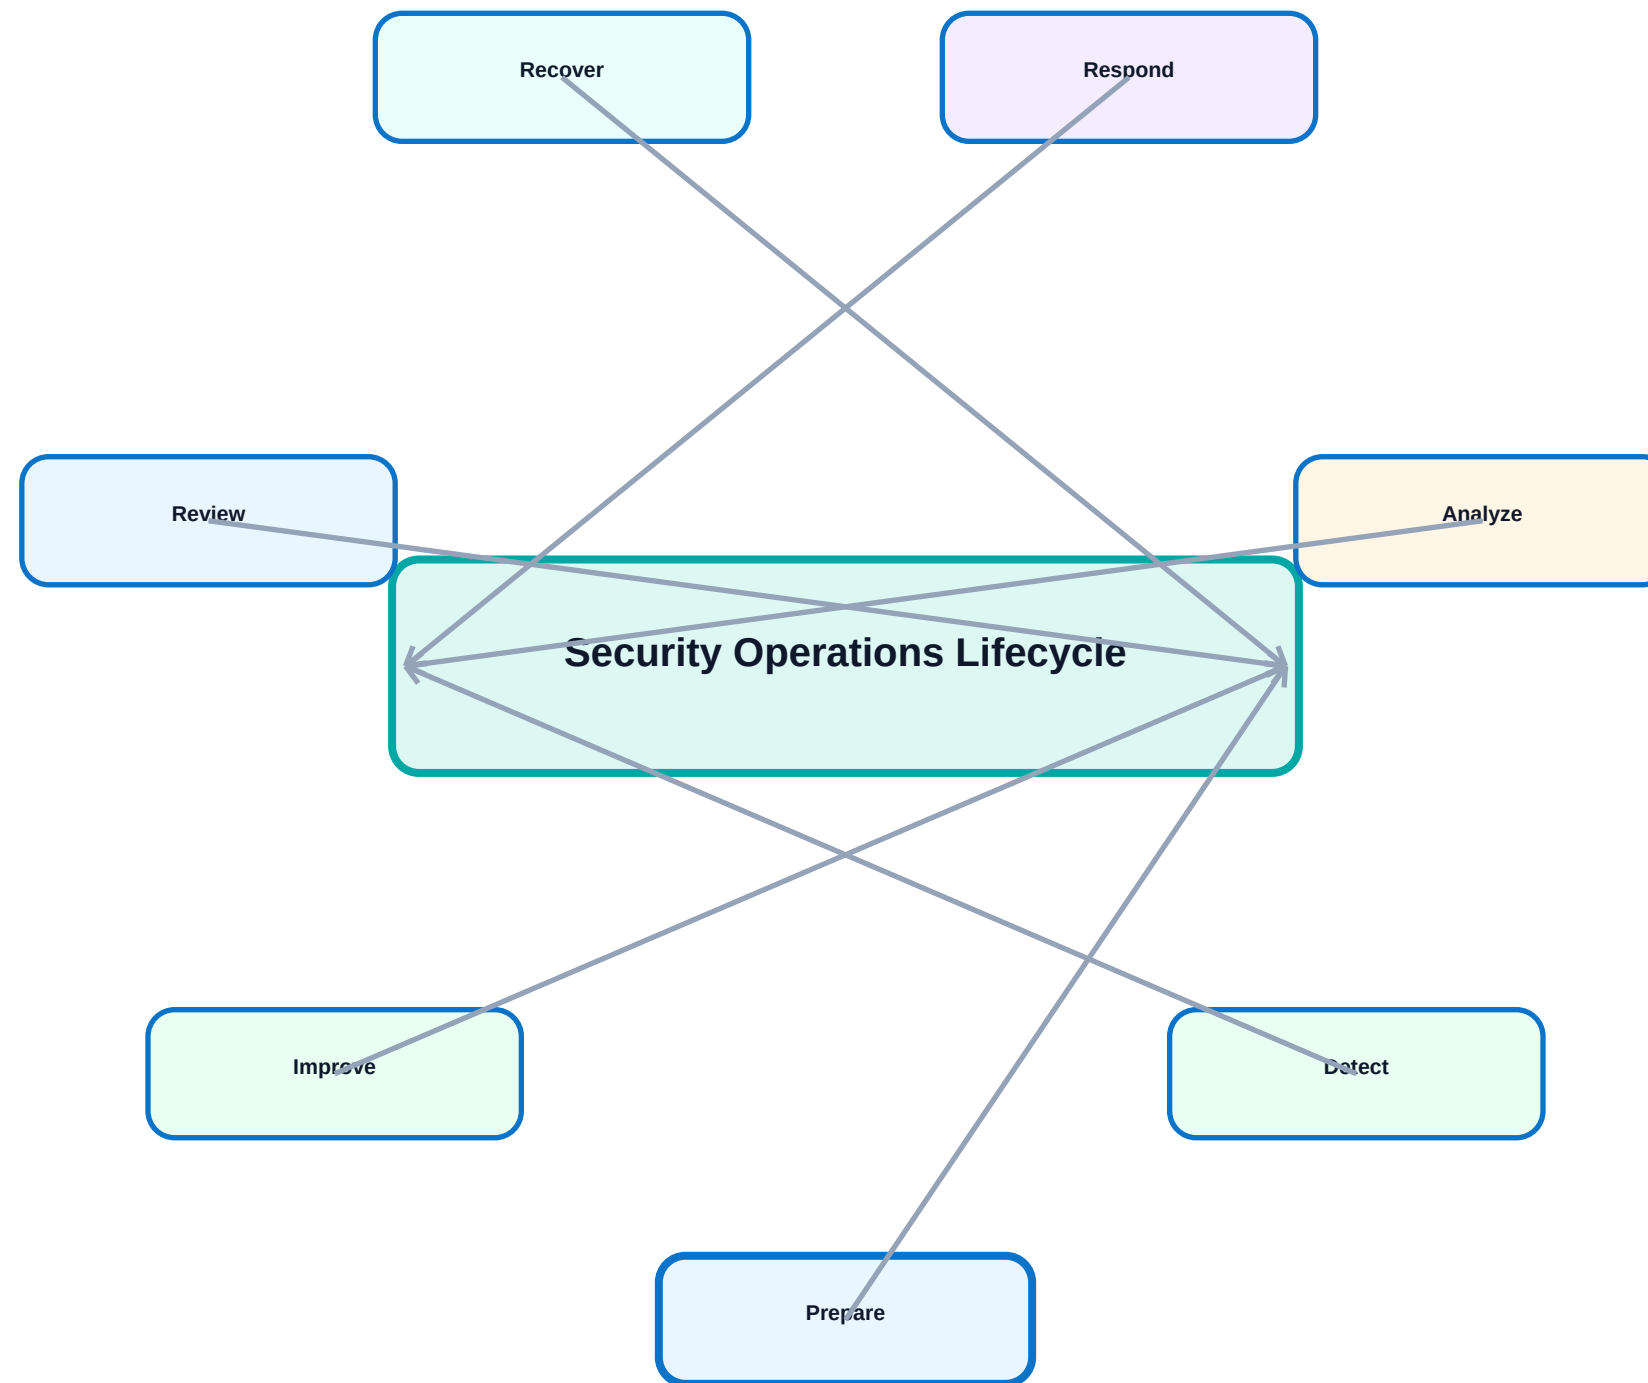

Code, build, test, security scan, stage, deploy, monitor, improve.

Code, build, test, security scan, stage, deploy, monitor, improve.

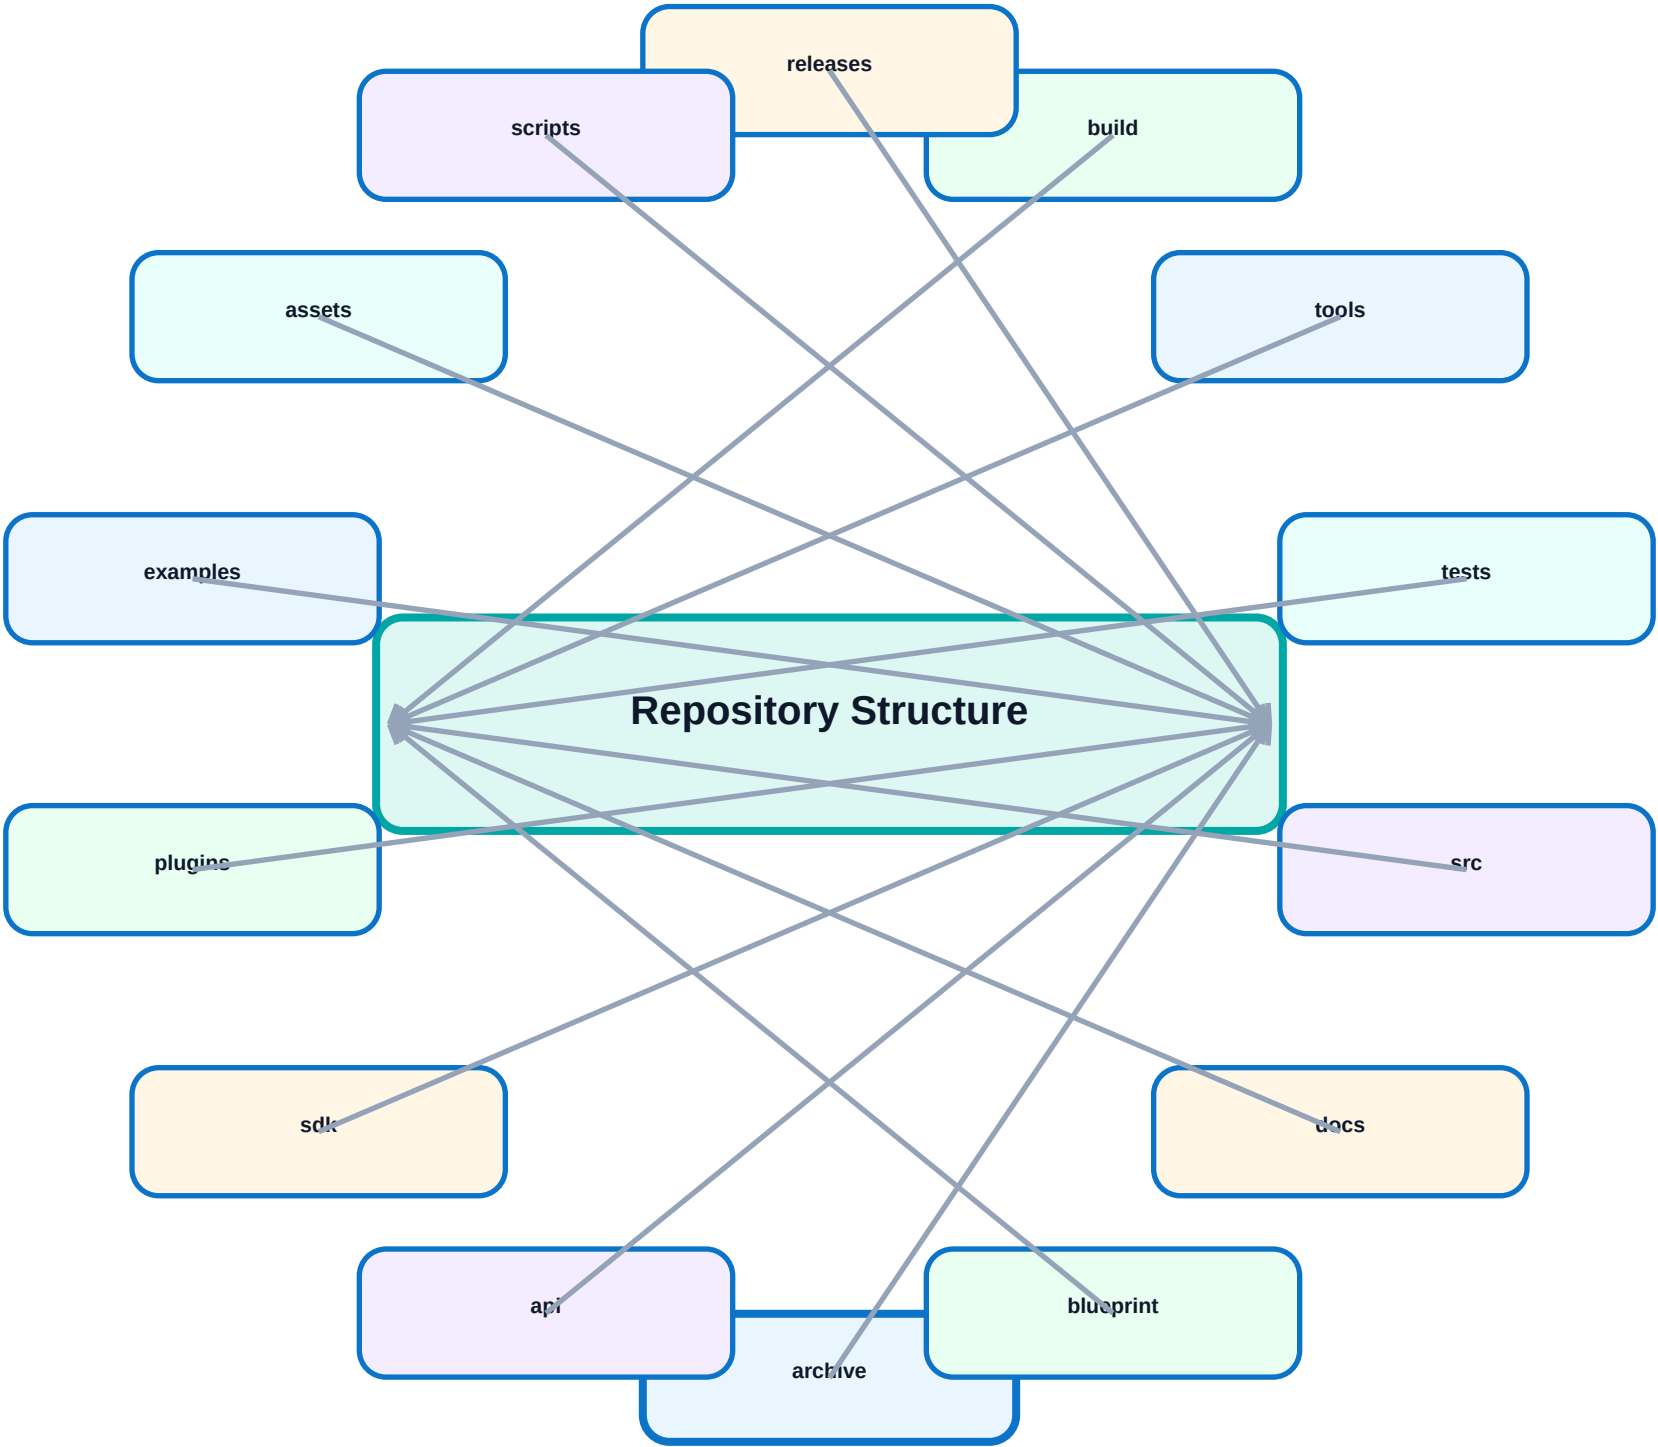

10 - Security Operations Lifecycle

Prepare, detect, analyze, respond, recover, review, improve.

Prepare, detect, analyze, respond, recover, review, improve.

Frozen repository hierarchy and artifact flow.

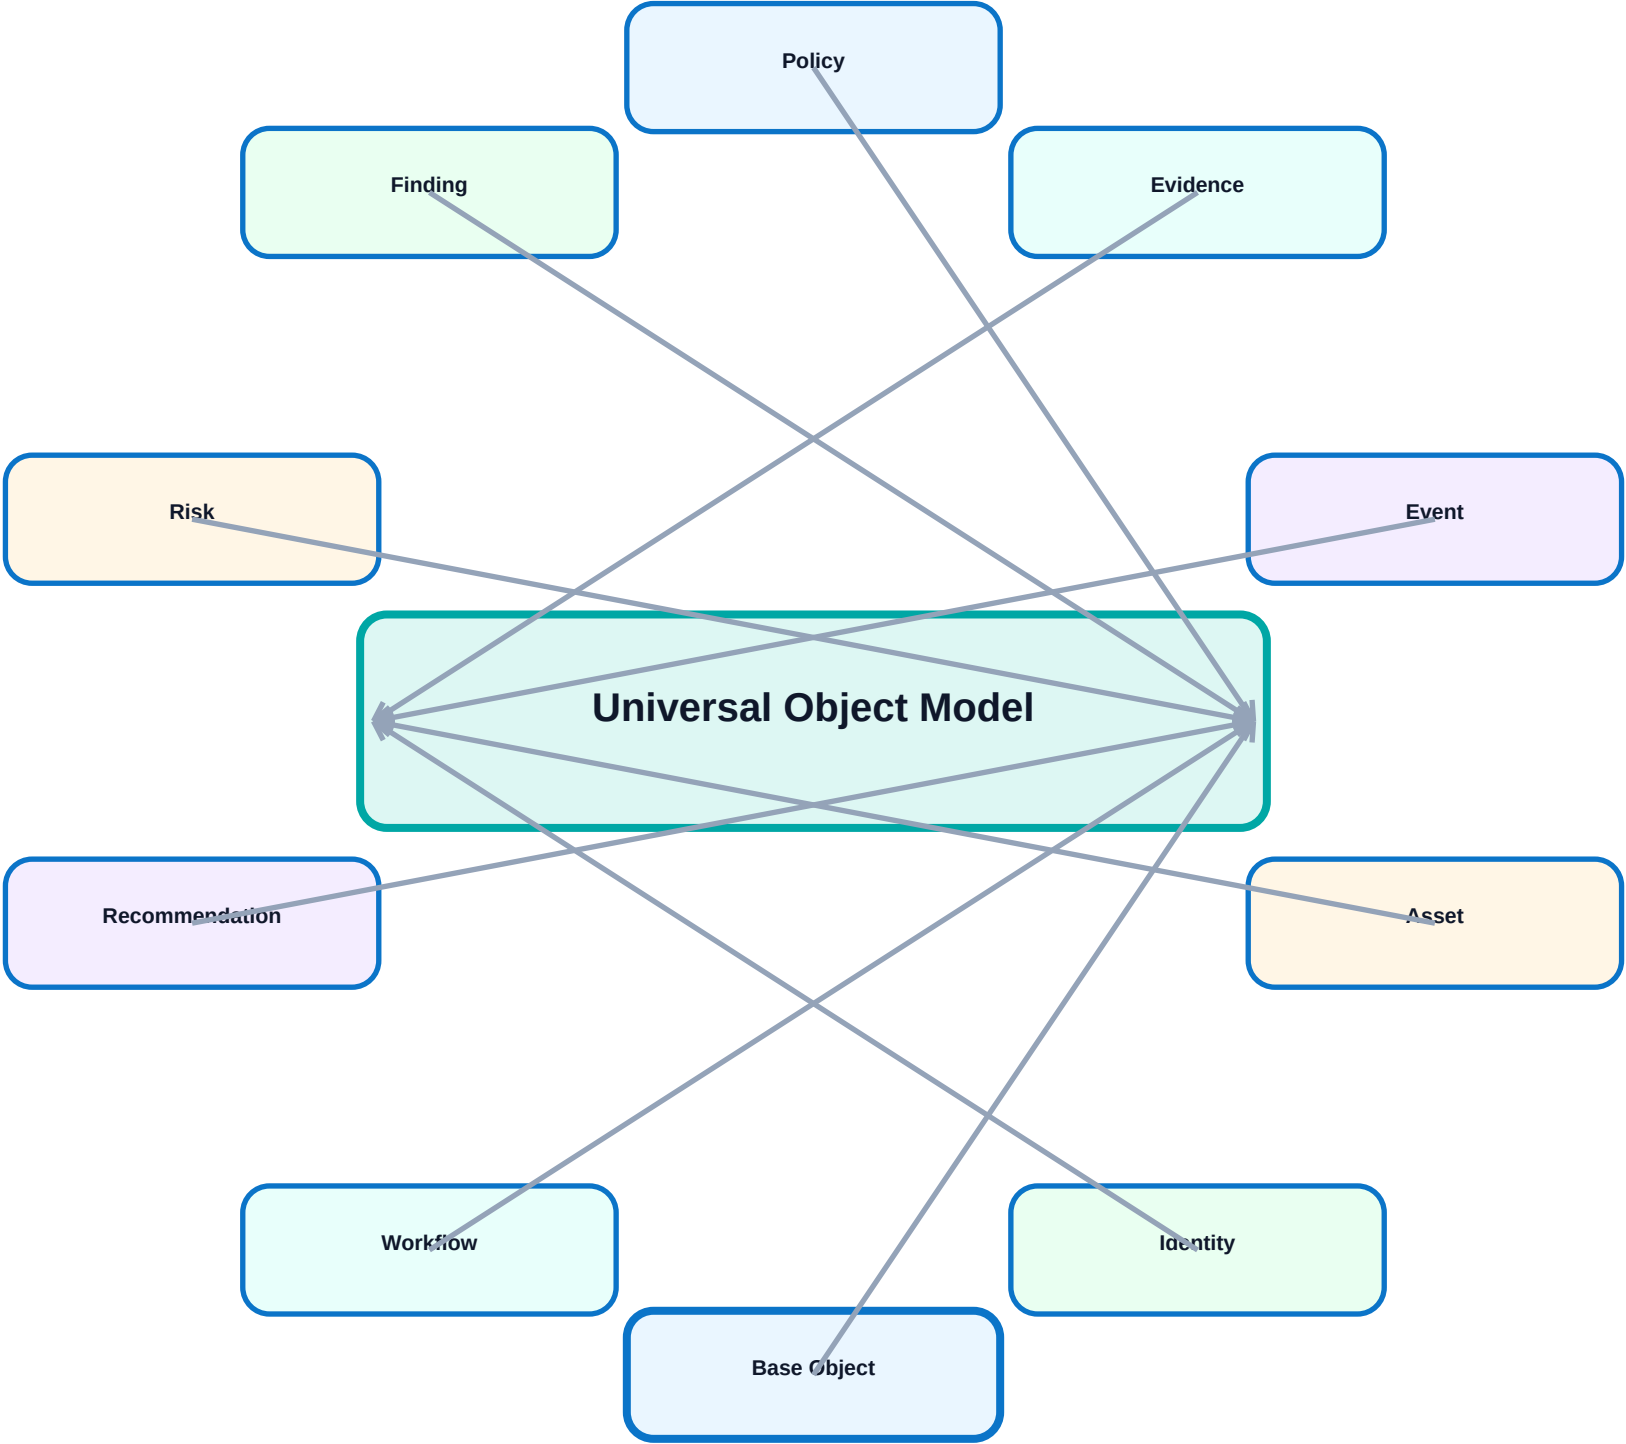

Frozen repository hierarchy and artifact flow.

12

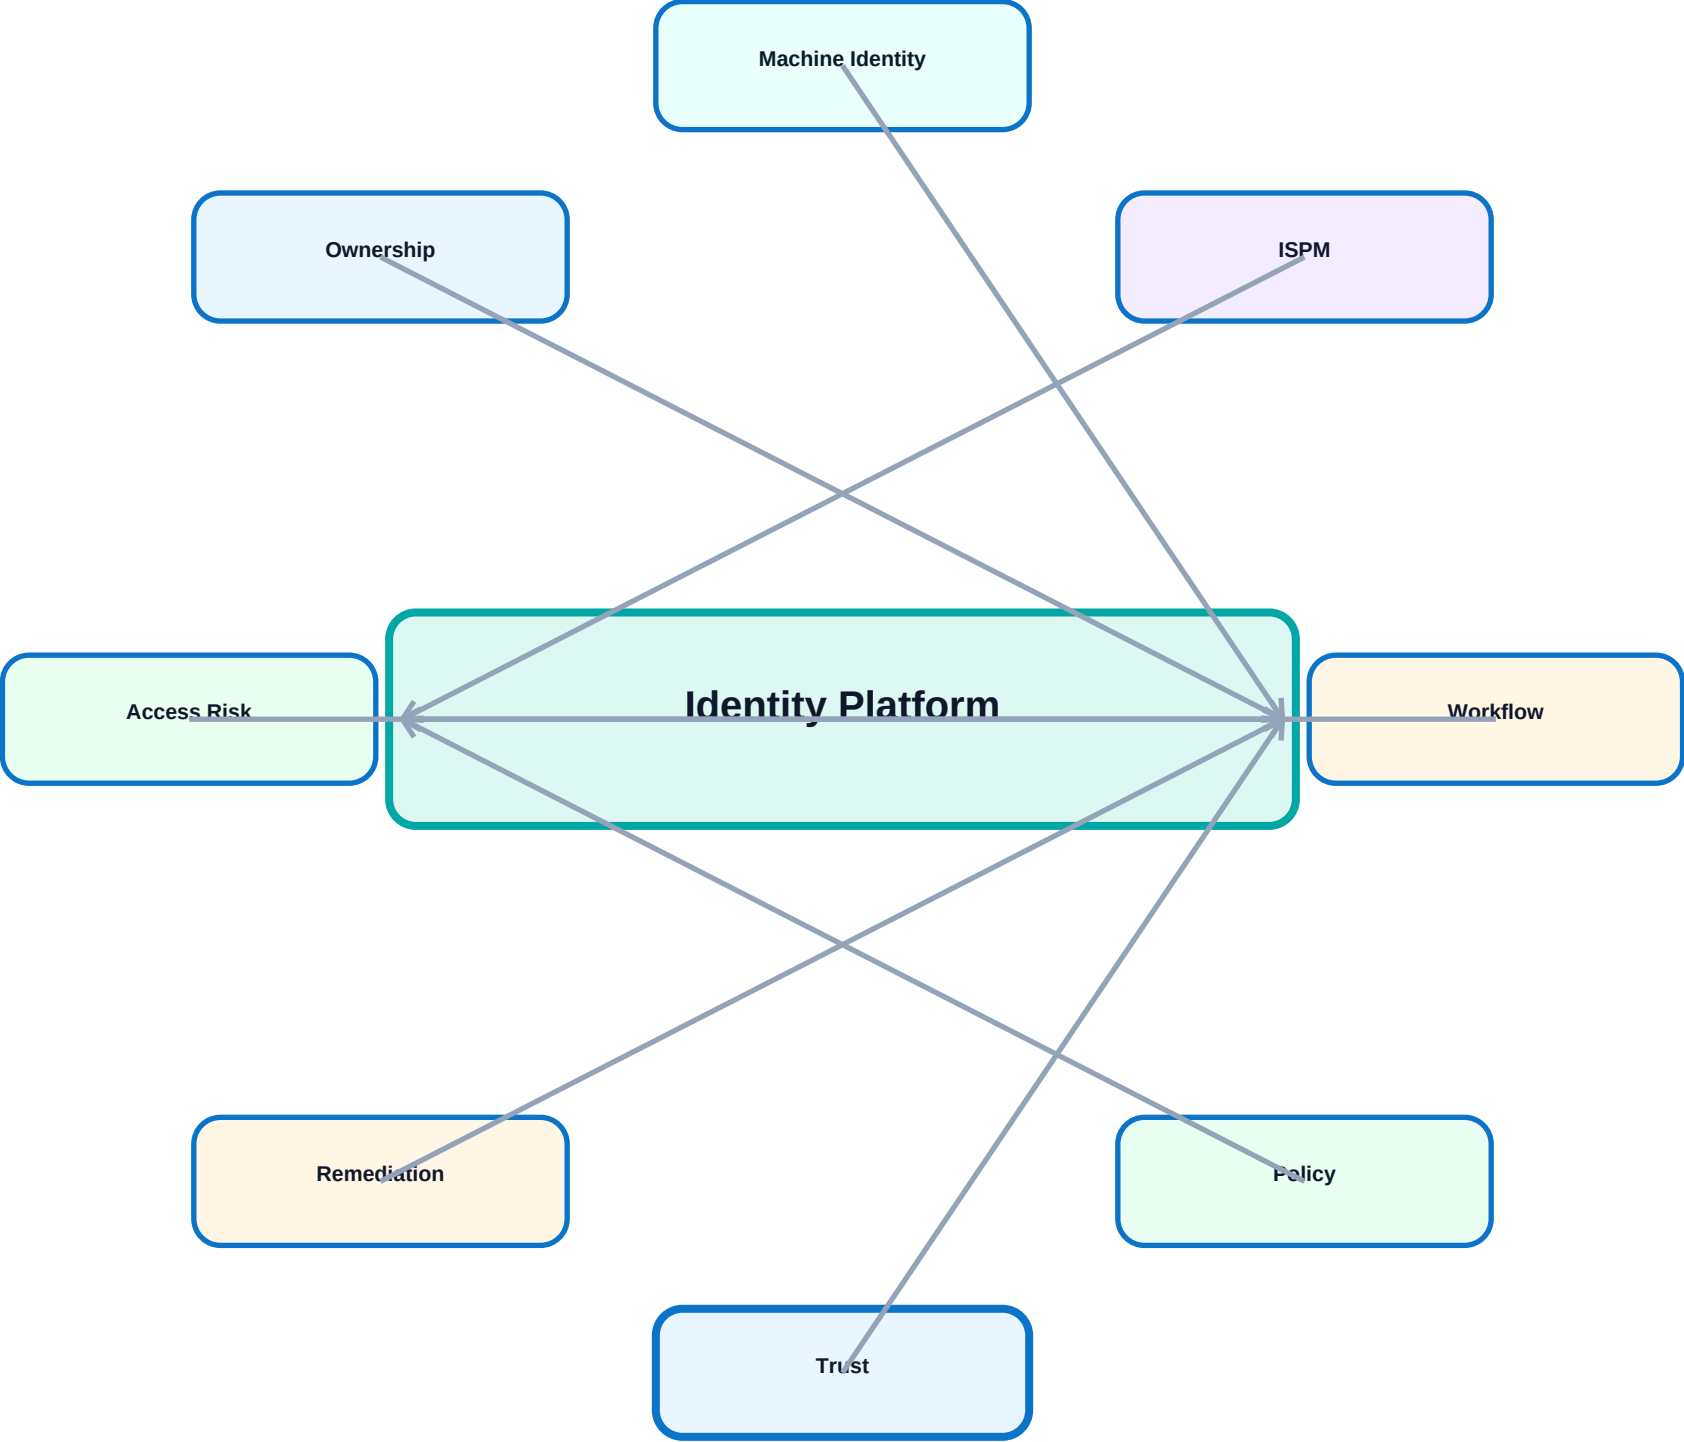

12 - Universal Object Model

Canonical object model supporting all engines.

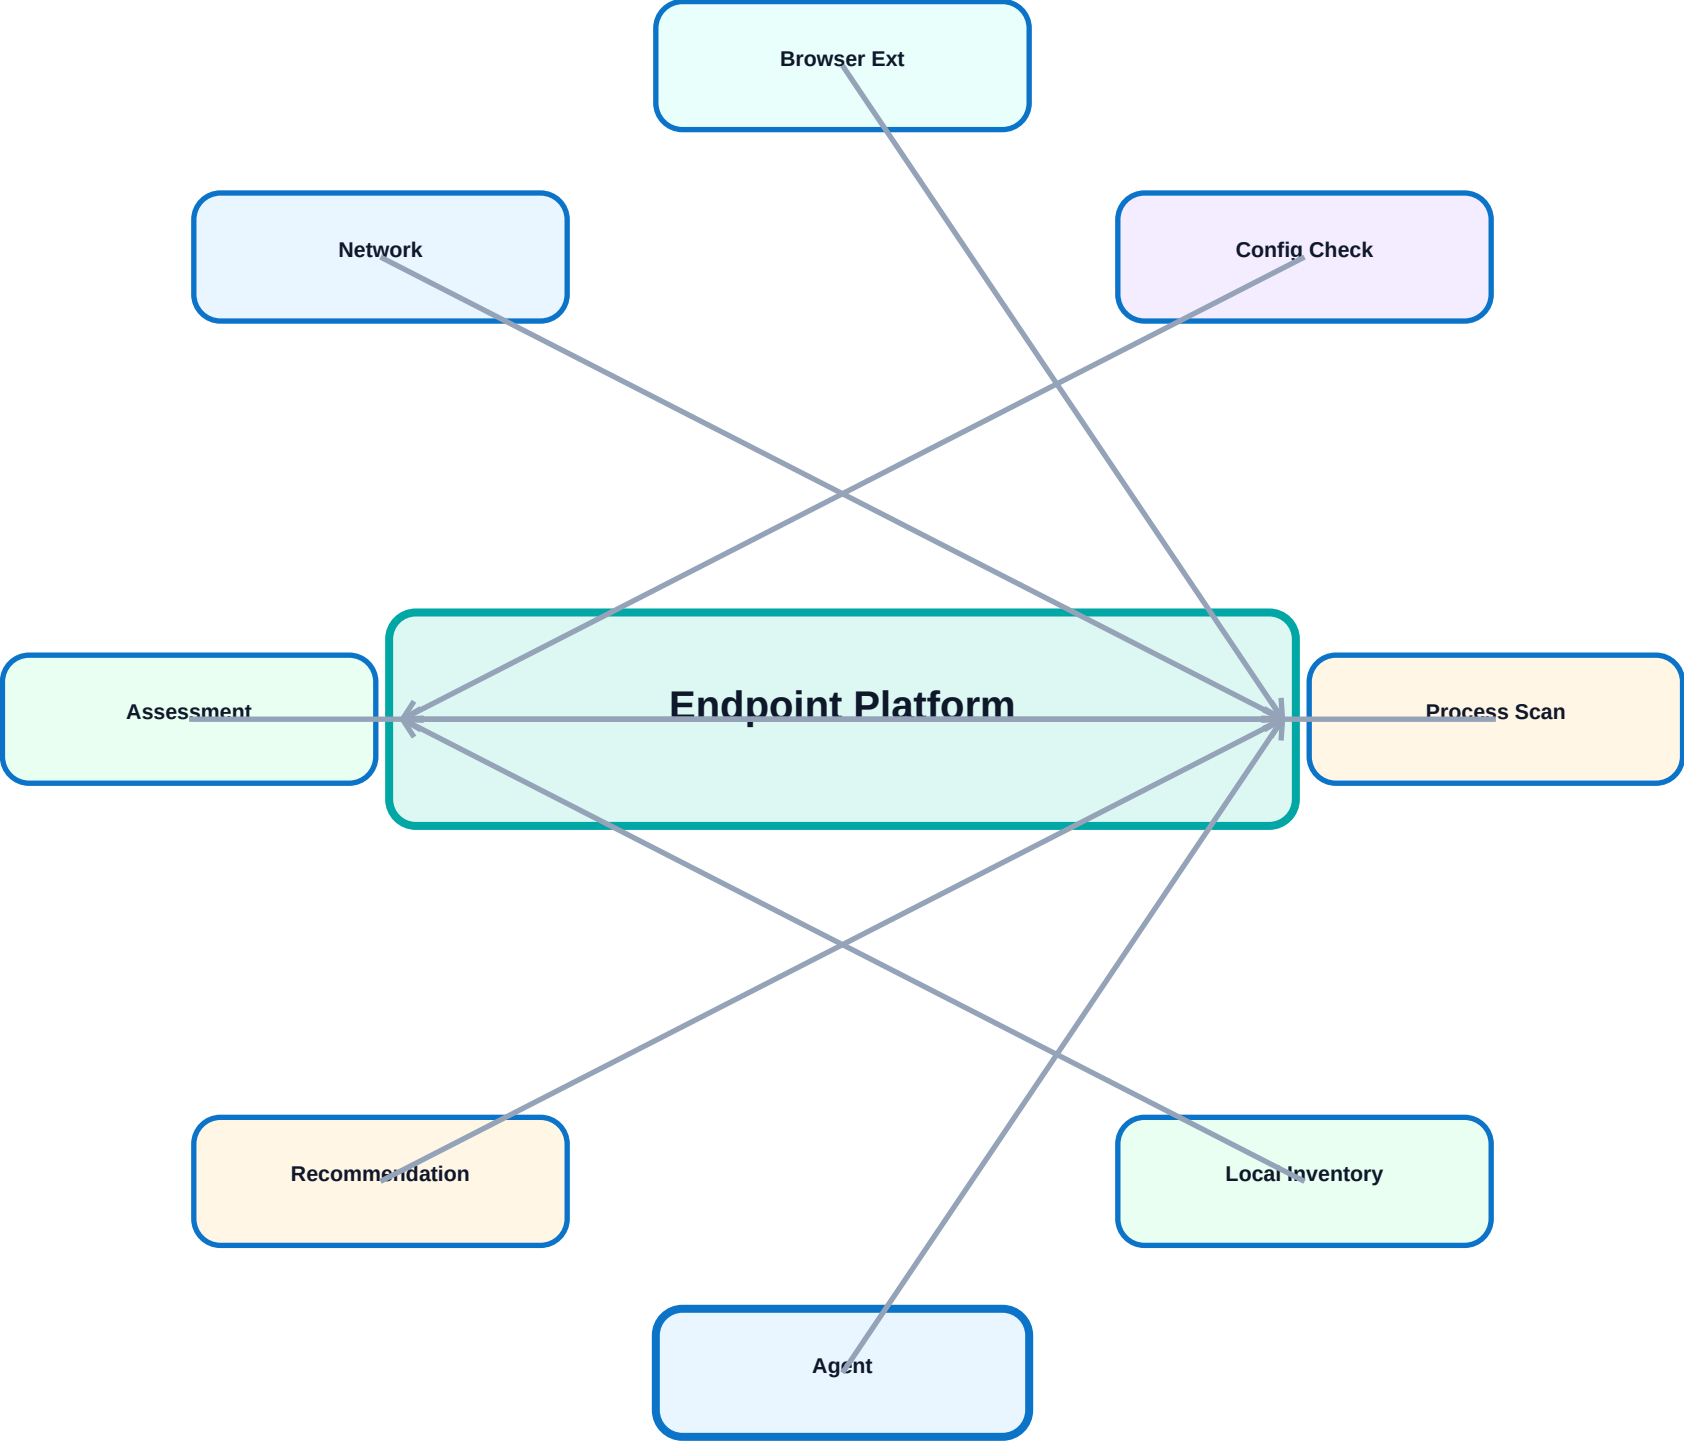

Canonical object model supporting all engines.

Human and non-human identity governance engines.

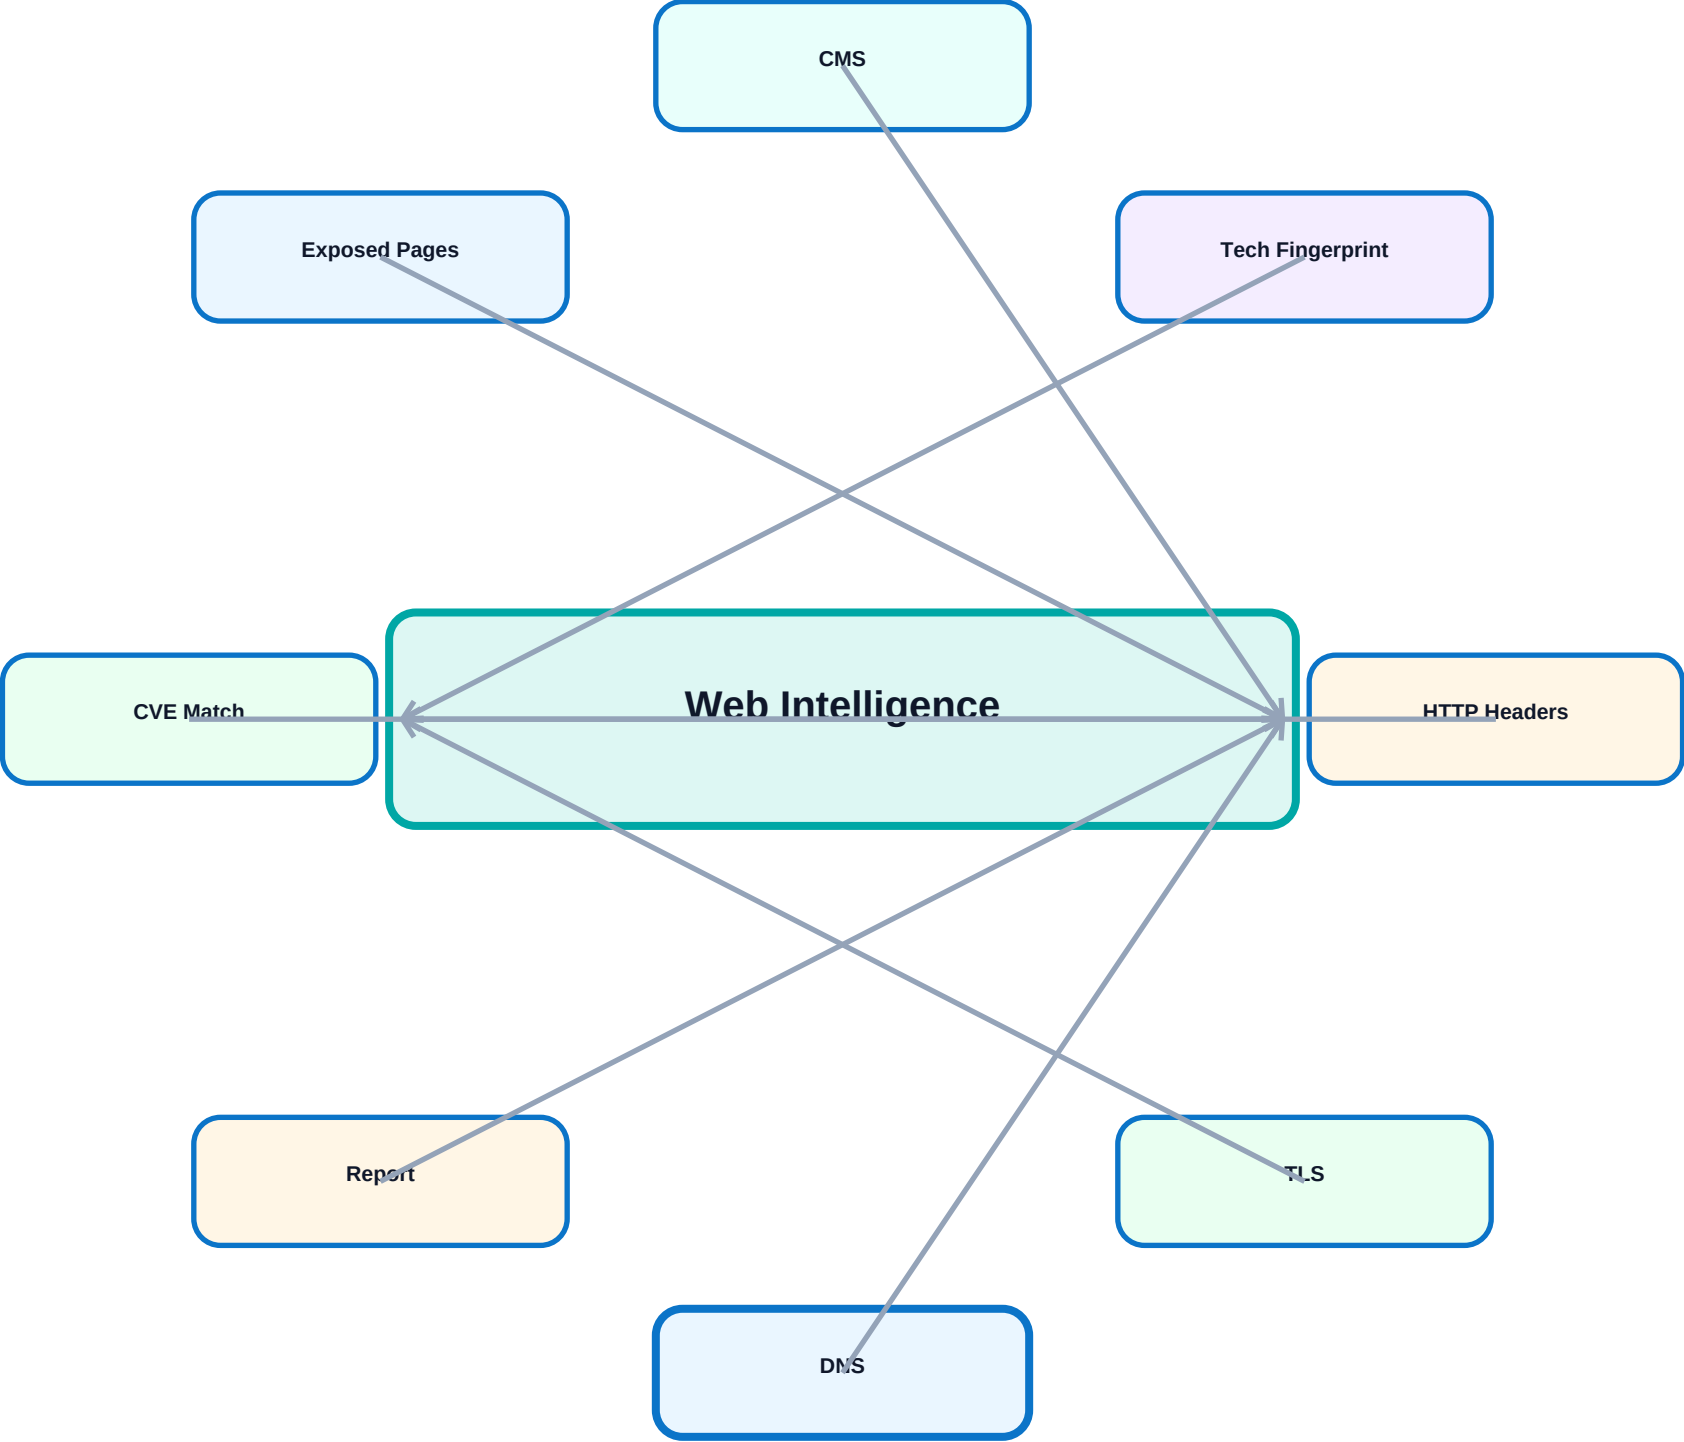

Human and non-human identity governance engines.

Private PC/laptop/tablet and enterprise endpoint visibility.

Private PC/laptop/tablet and enterprise endpoint visibility.

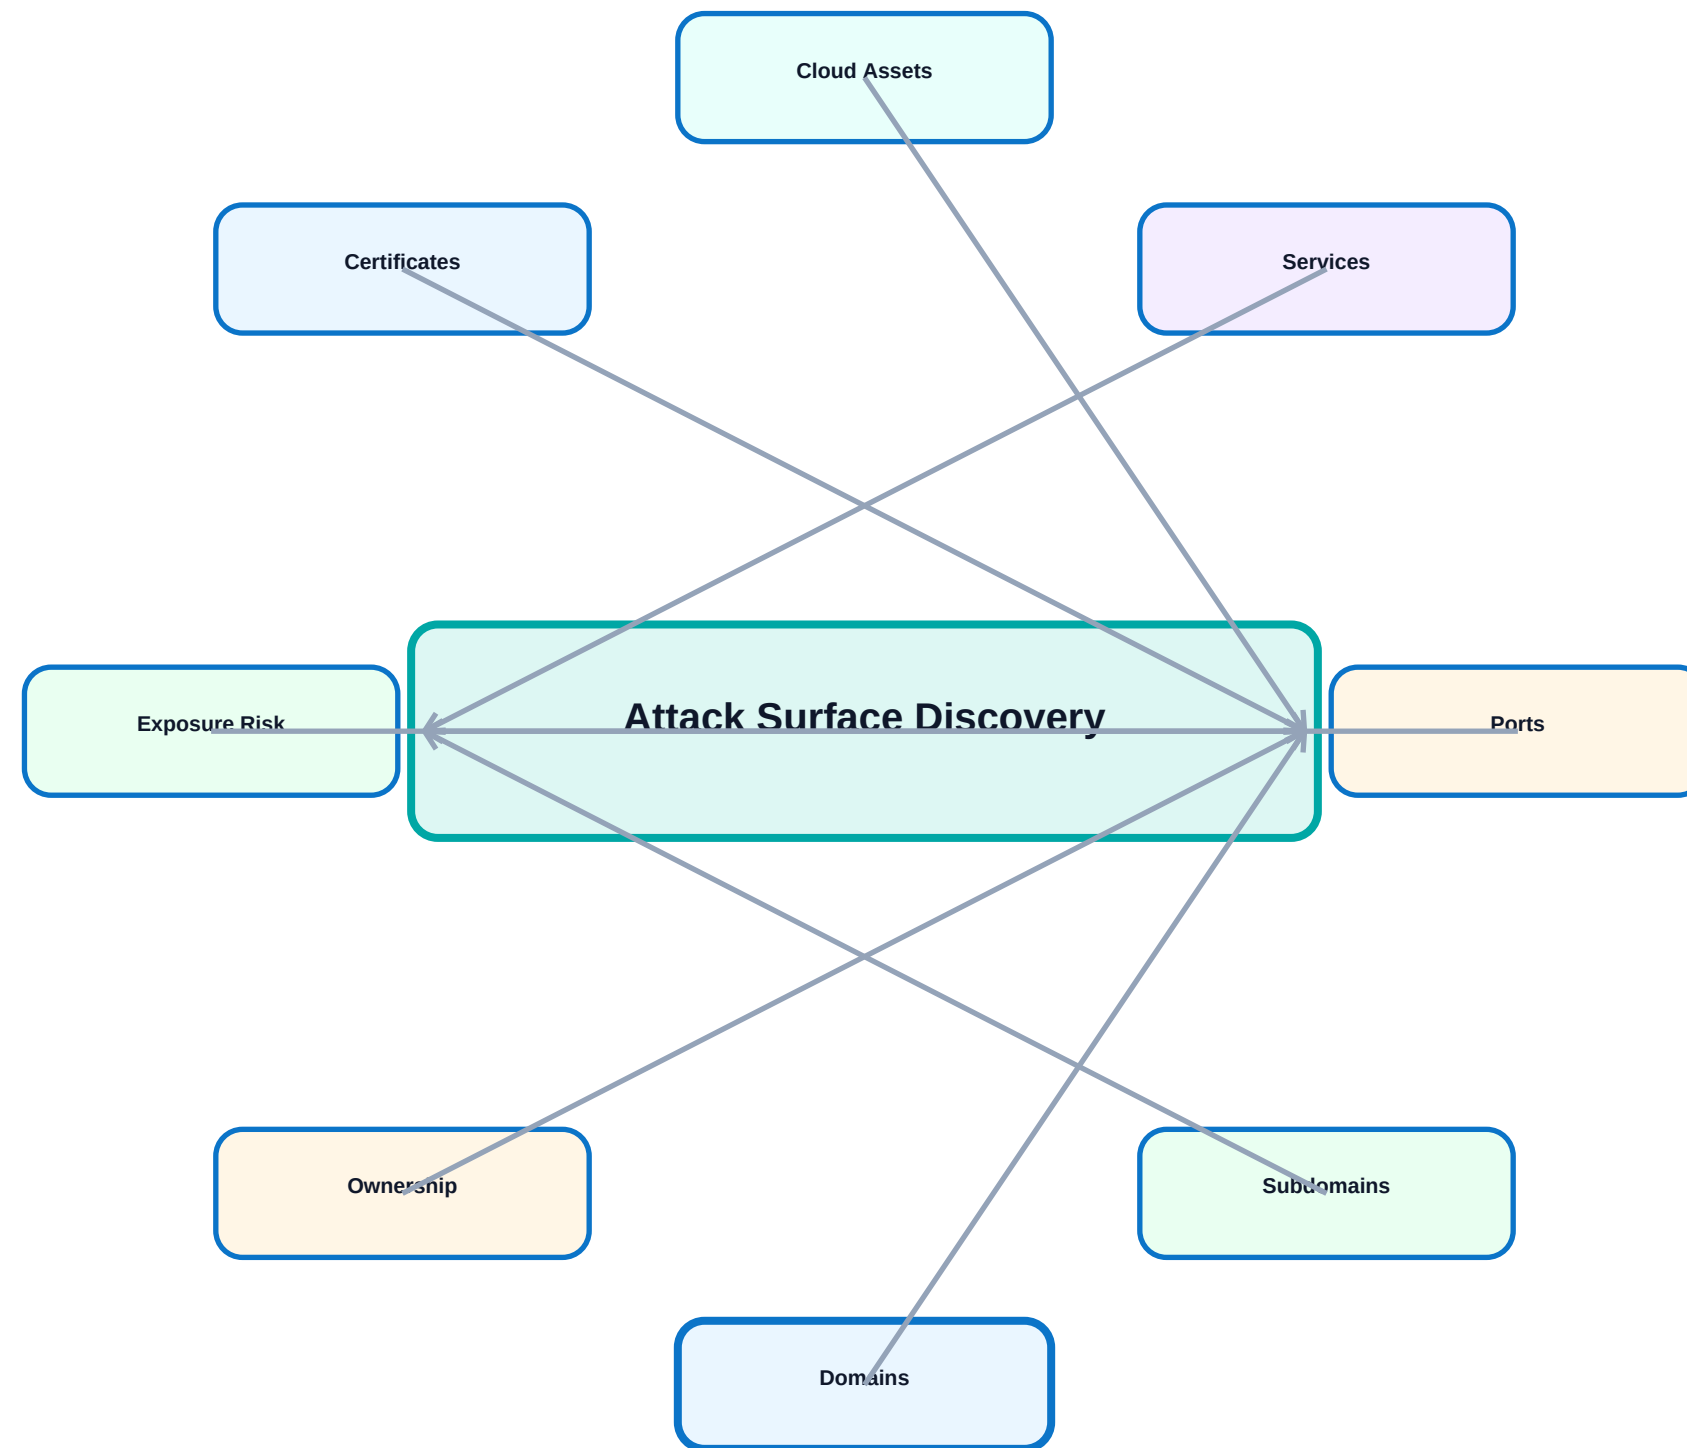

Public and private web security scanning capabilities.

Public and private web security scanning capabilities.

16 - Attack Surface Discovery

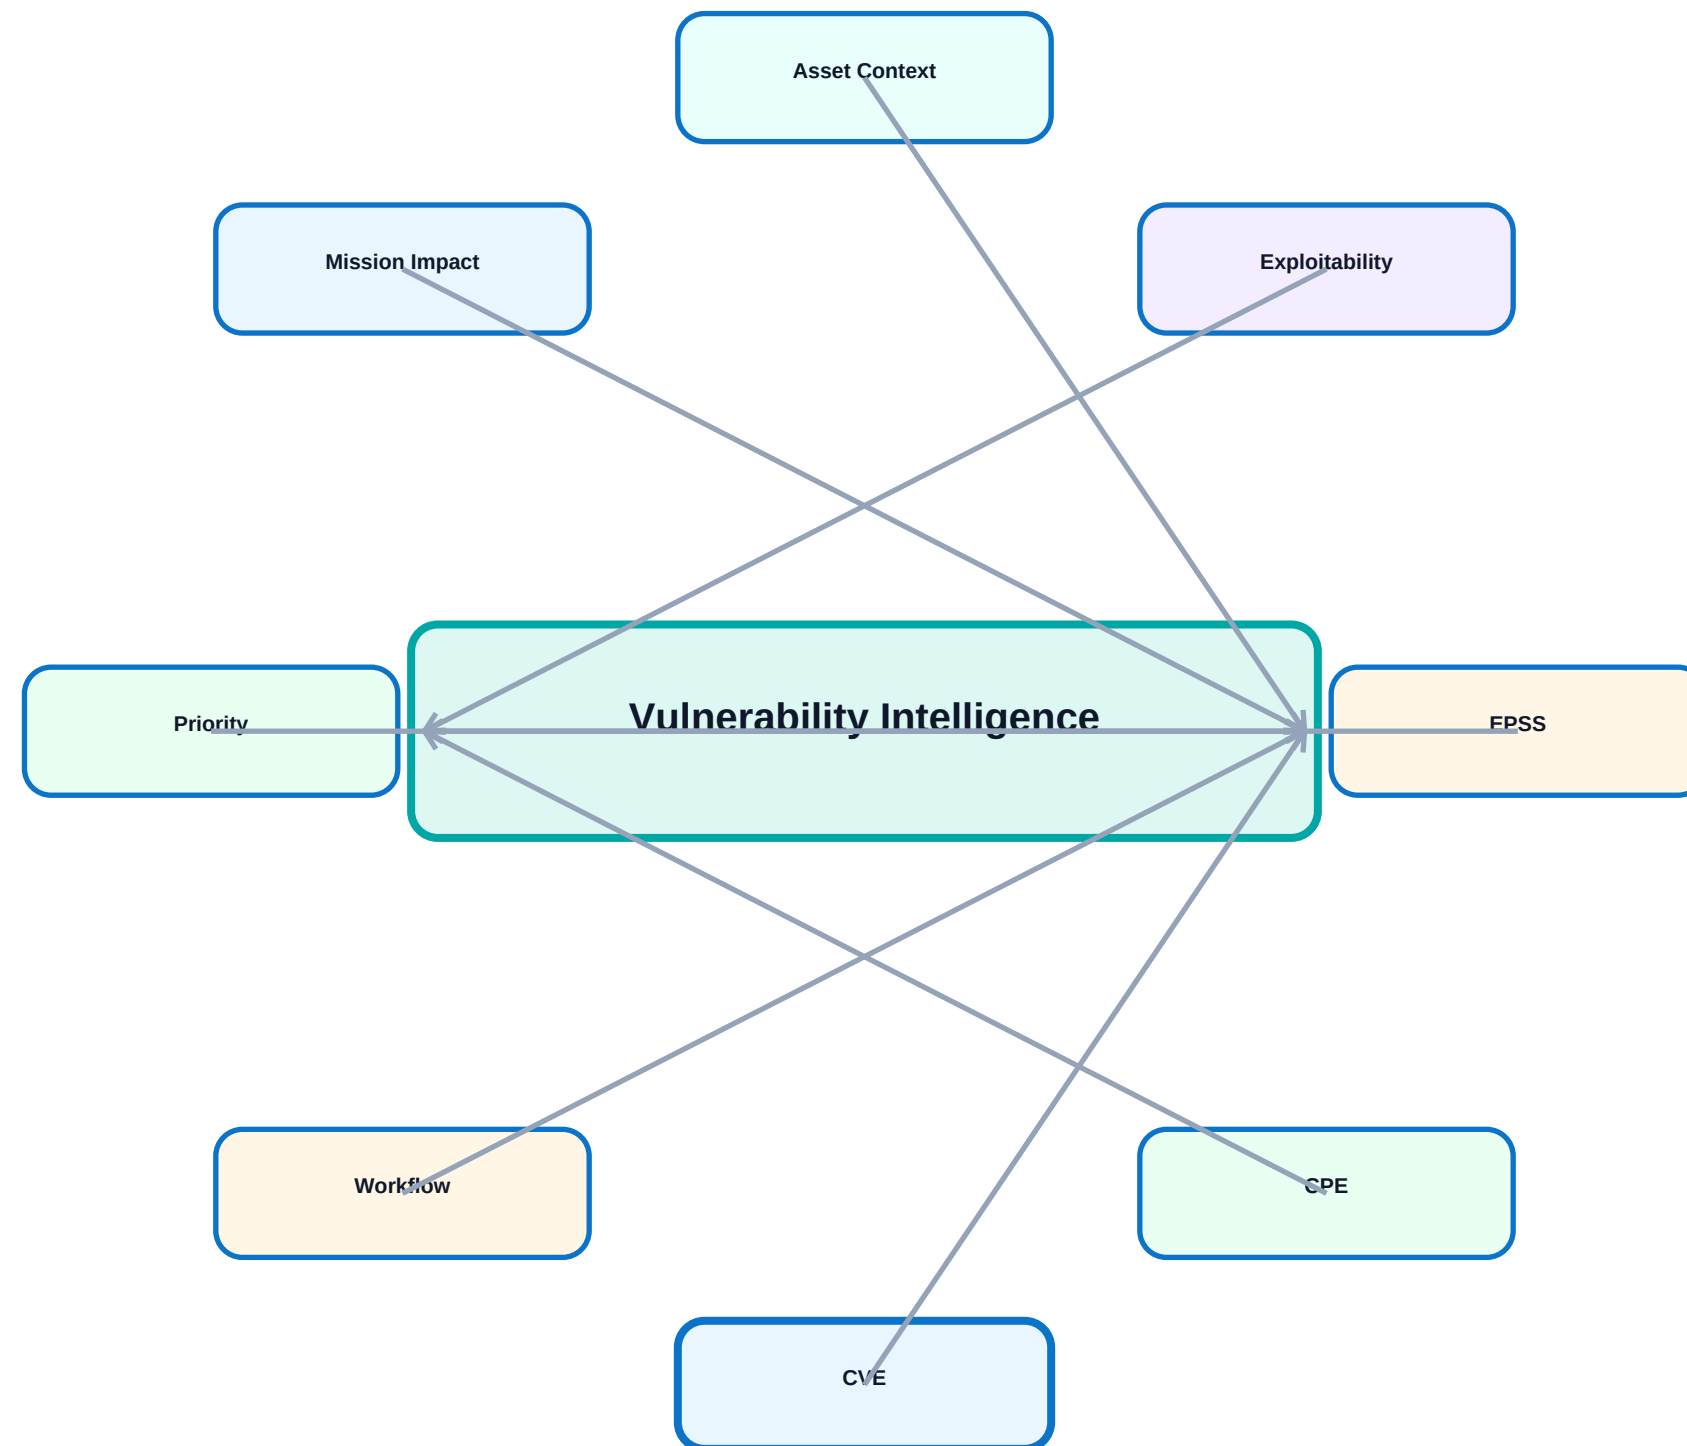

External exposure discovery and prioritization.

External exposure discovery and prioritization.

17 - Vulnerability Intelligence

Vulnerability enrichment, prioritization, and evidence linkage.

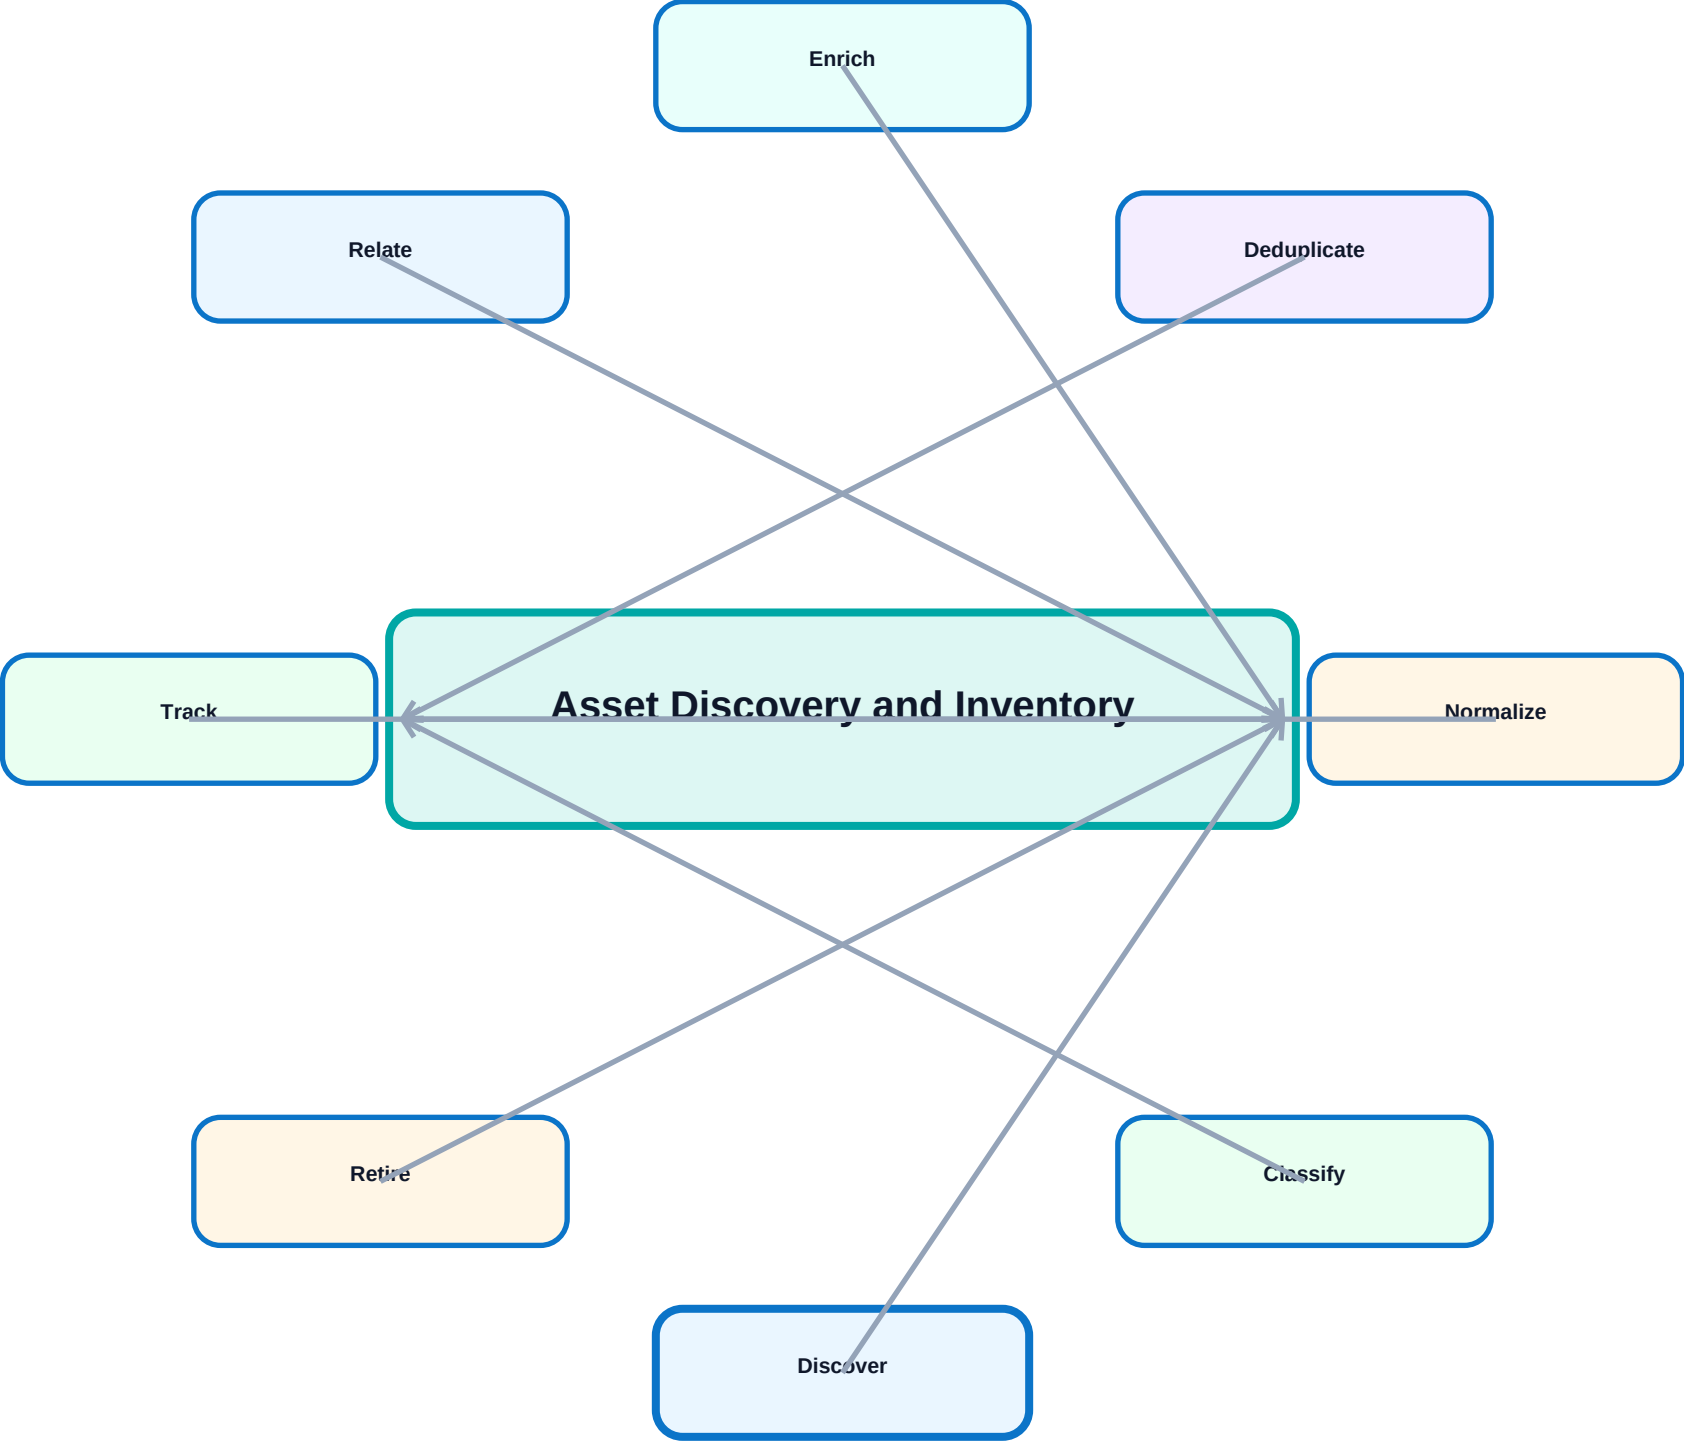

Vulnerability enrichment, prioritization, and evidence linkage.

18

18 - Asset Discovery and Inventory

Authoritative inventory across endpoint, cloud, web, and infrastructure.

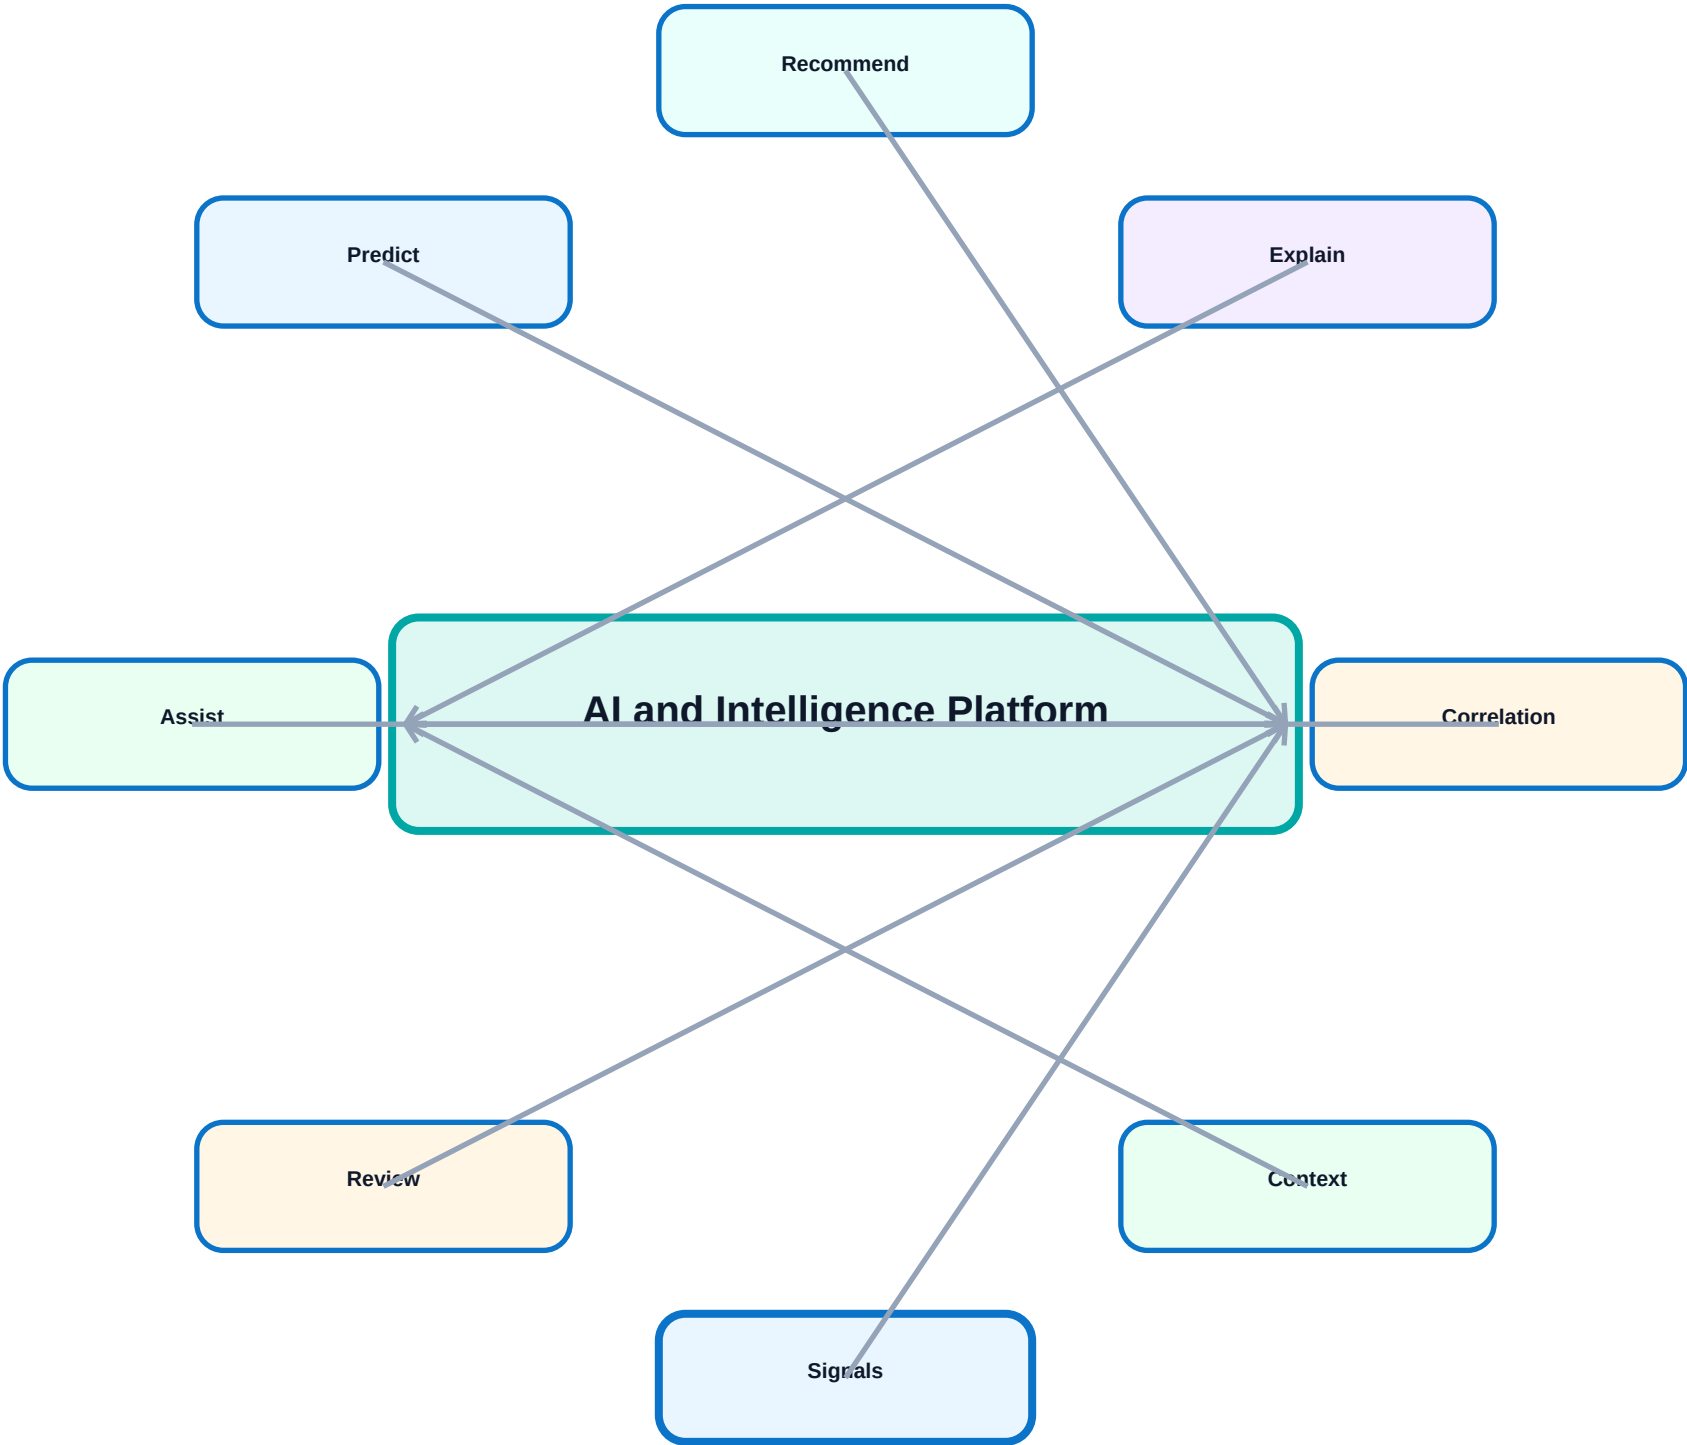

Authoritative inventory across endpoint, cloud, web, and infrastructure.

19

19 - AI and Intelligence Platform

AI assistance, correlation, summarization, and risk prediction.

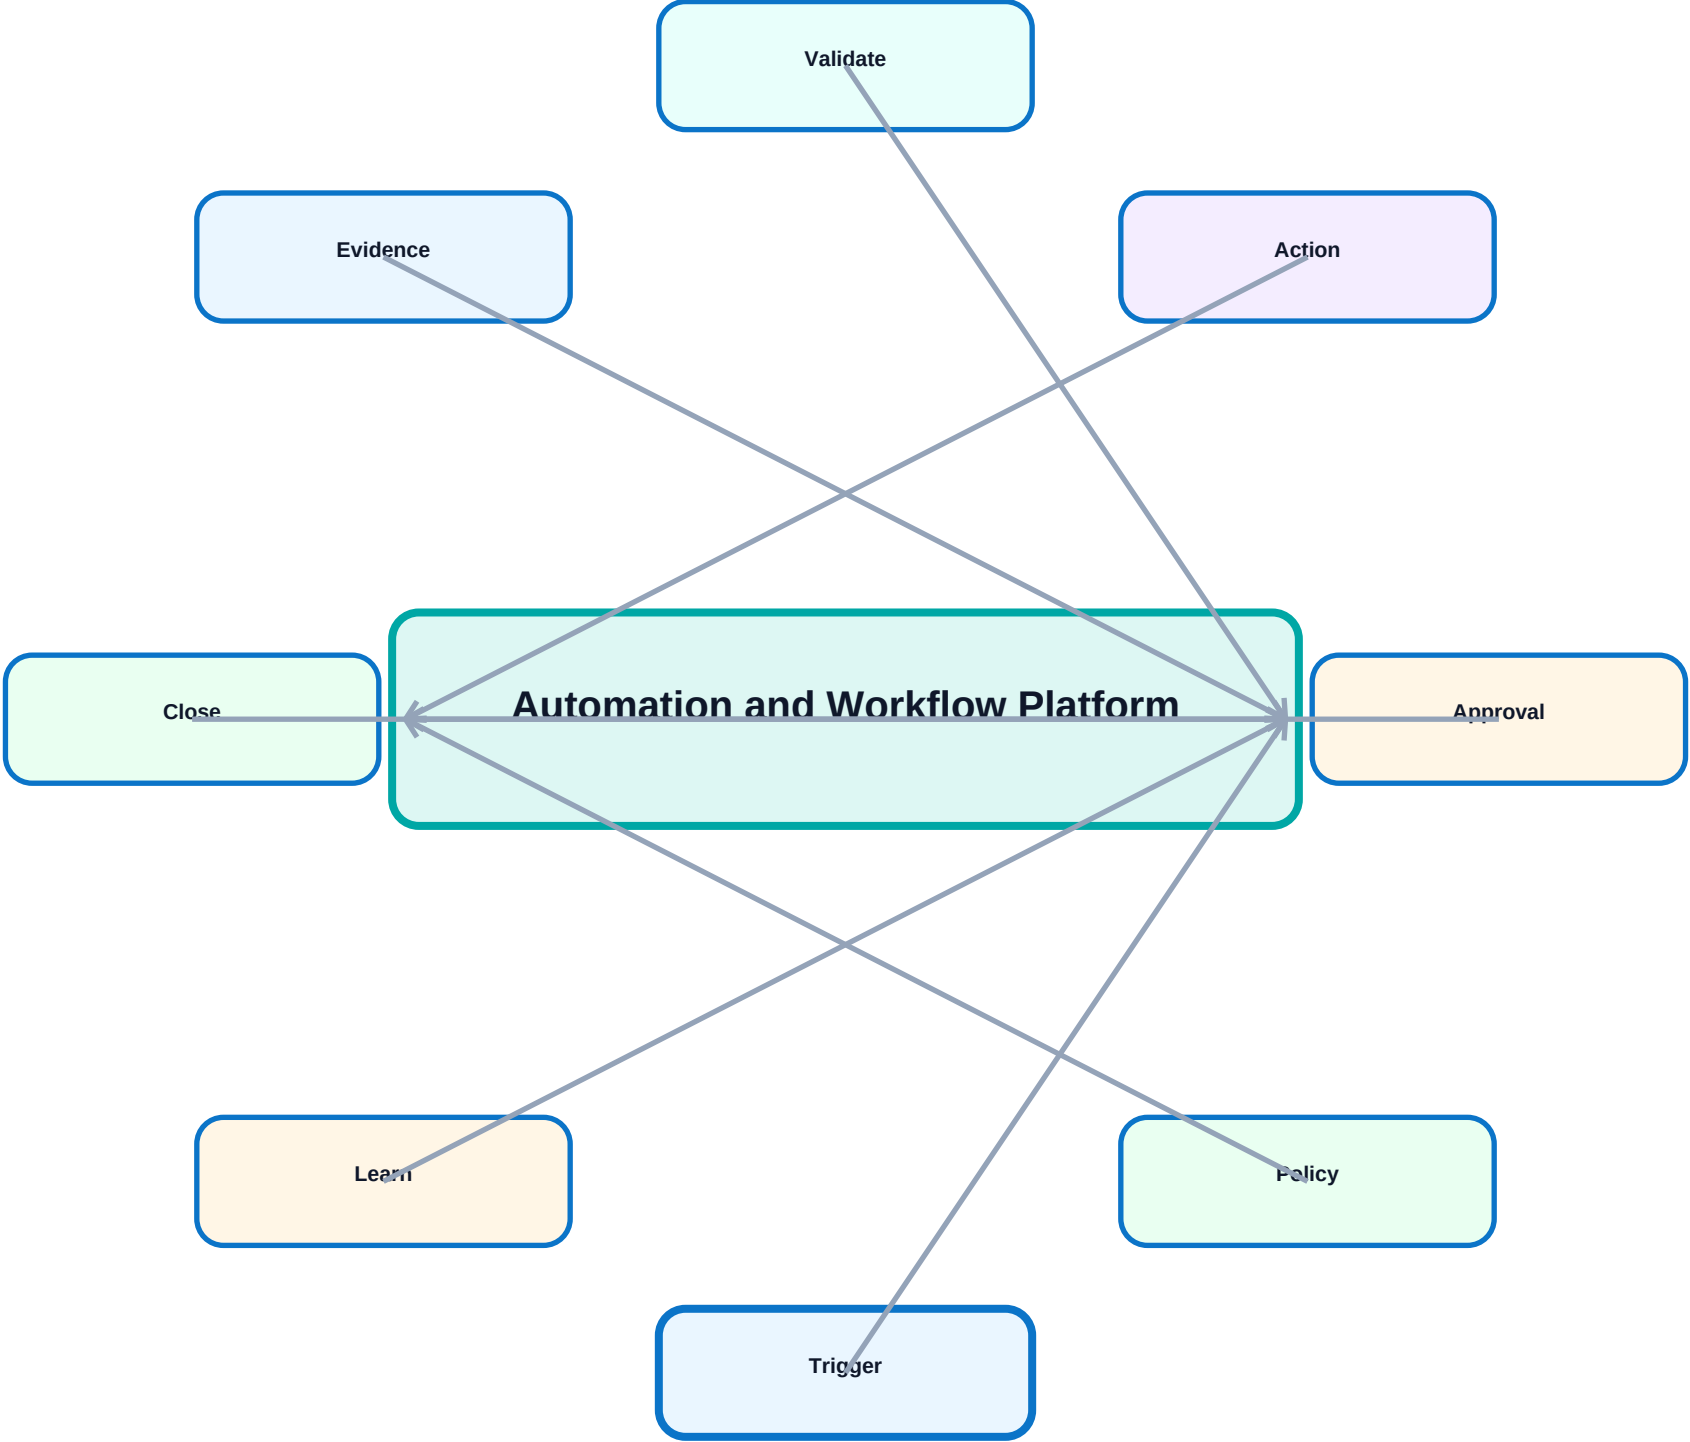

AI assistance, correlation, summarization, and risk prediction.

20

20 - Automation and Workflow Platform

Playbooks, approvals, remediation, and audit trails.

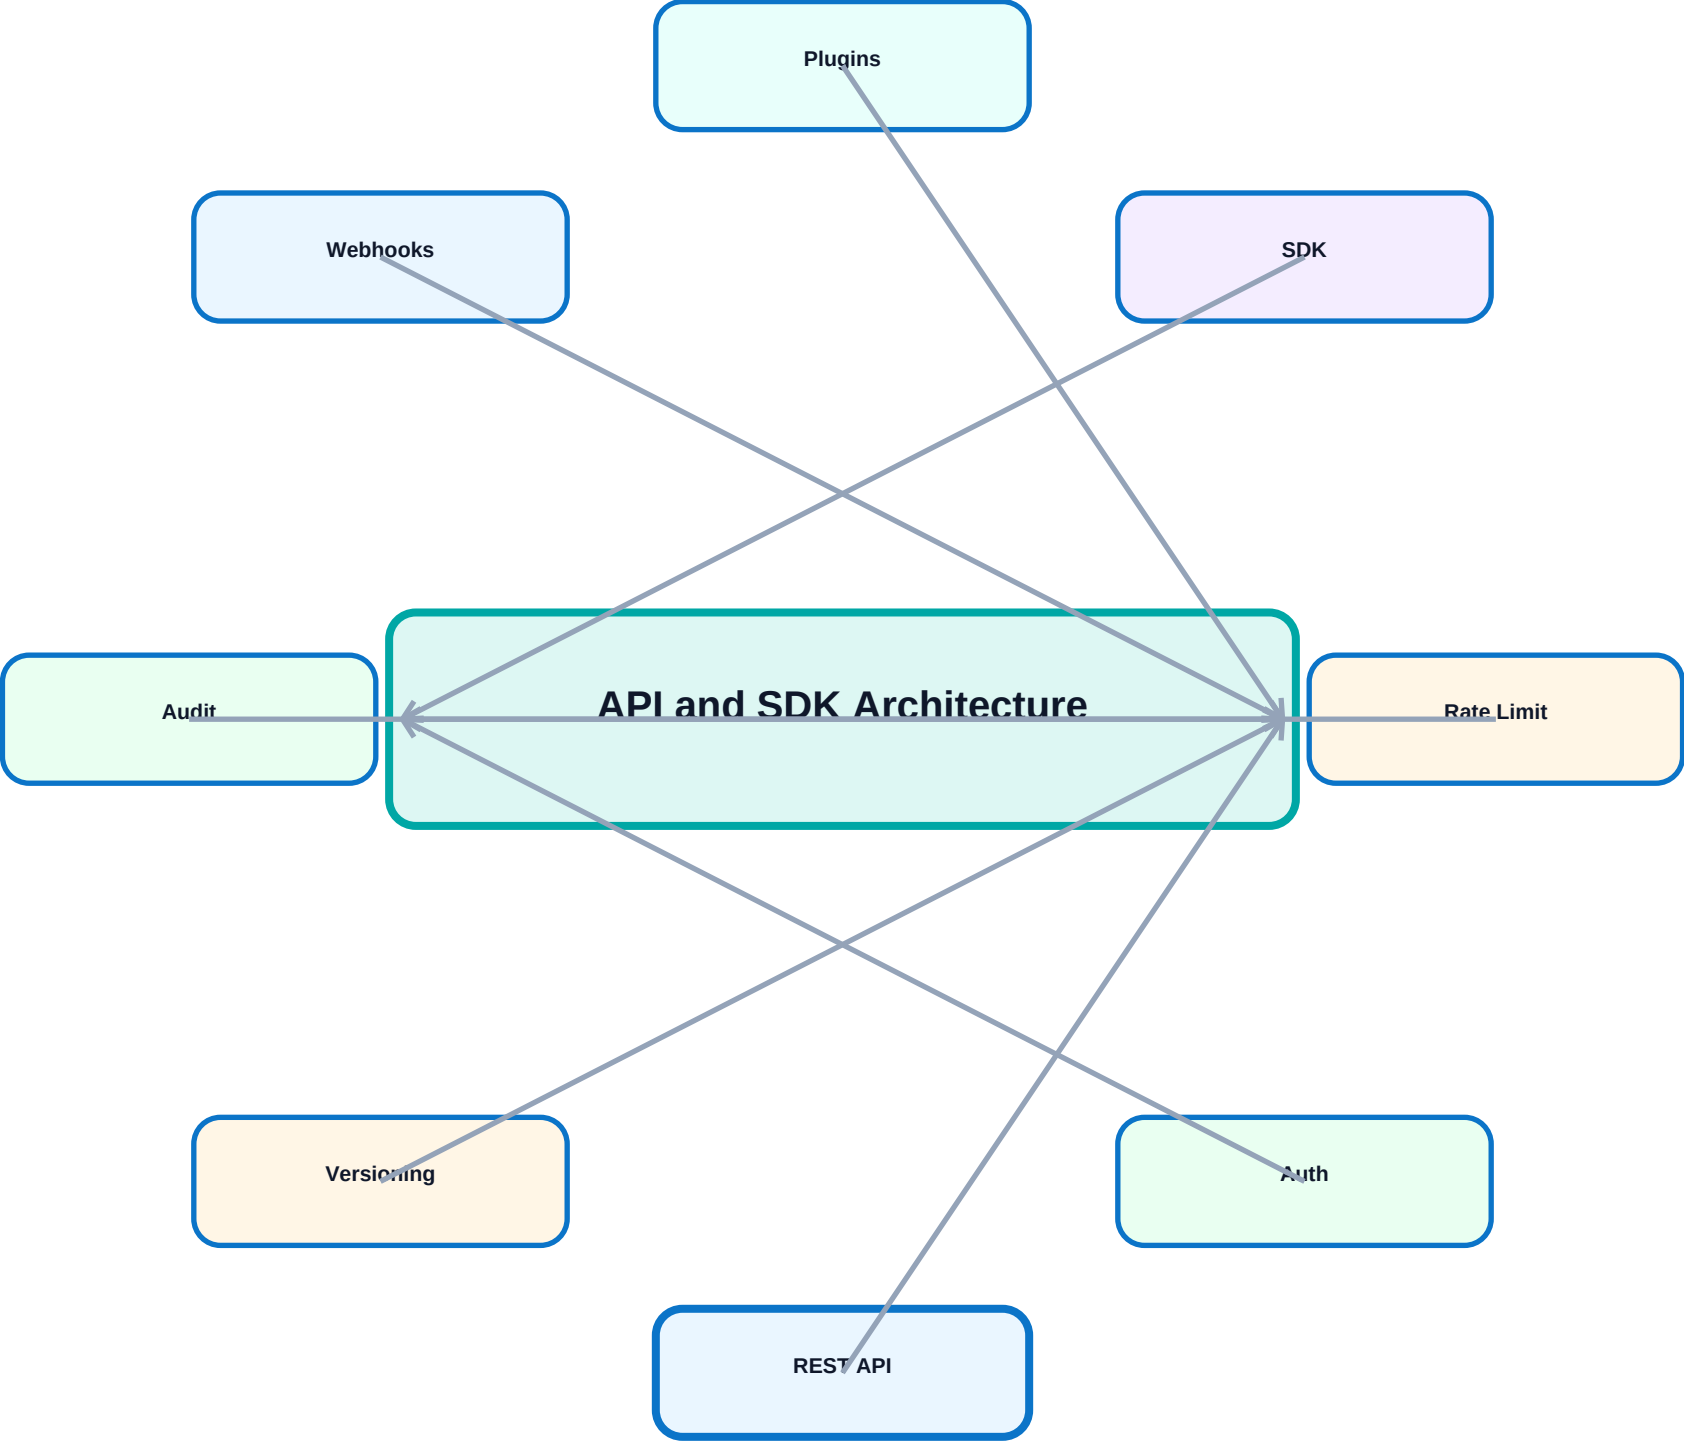

Playbooks, approvals, remediation, and audit trails.

21

21 - API and SDK Architecture

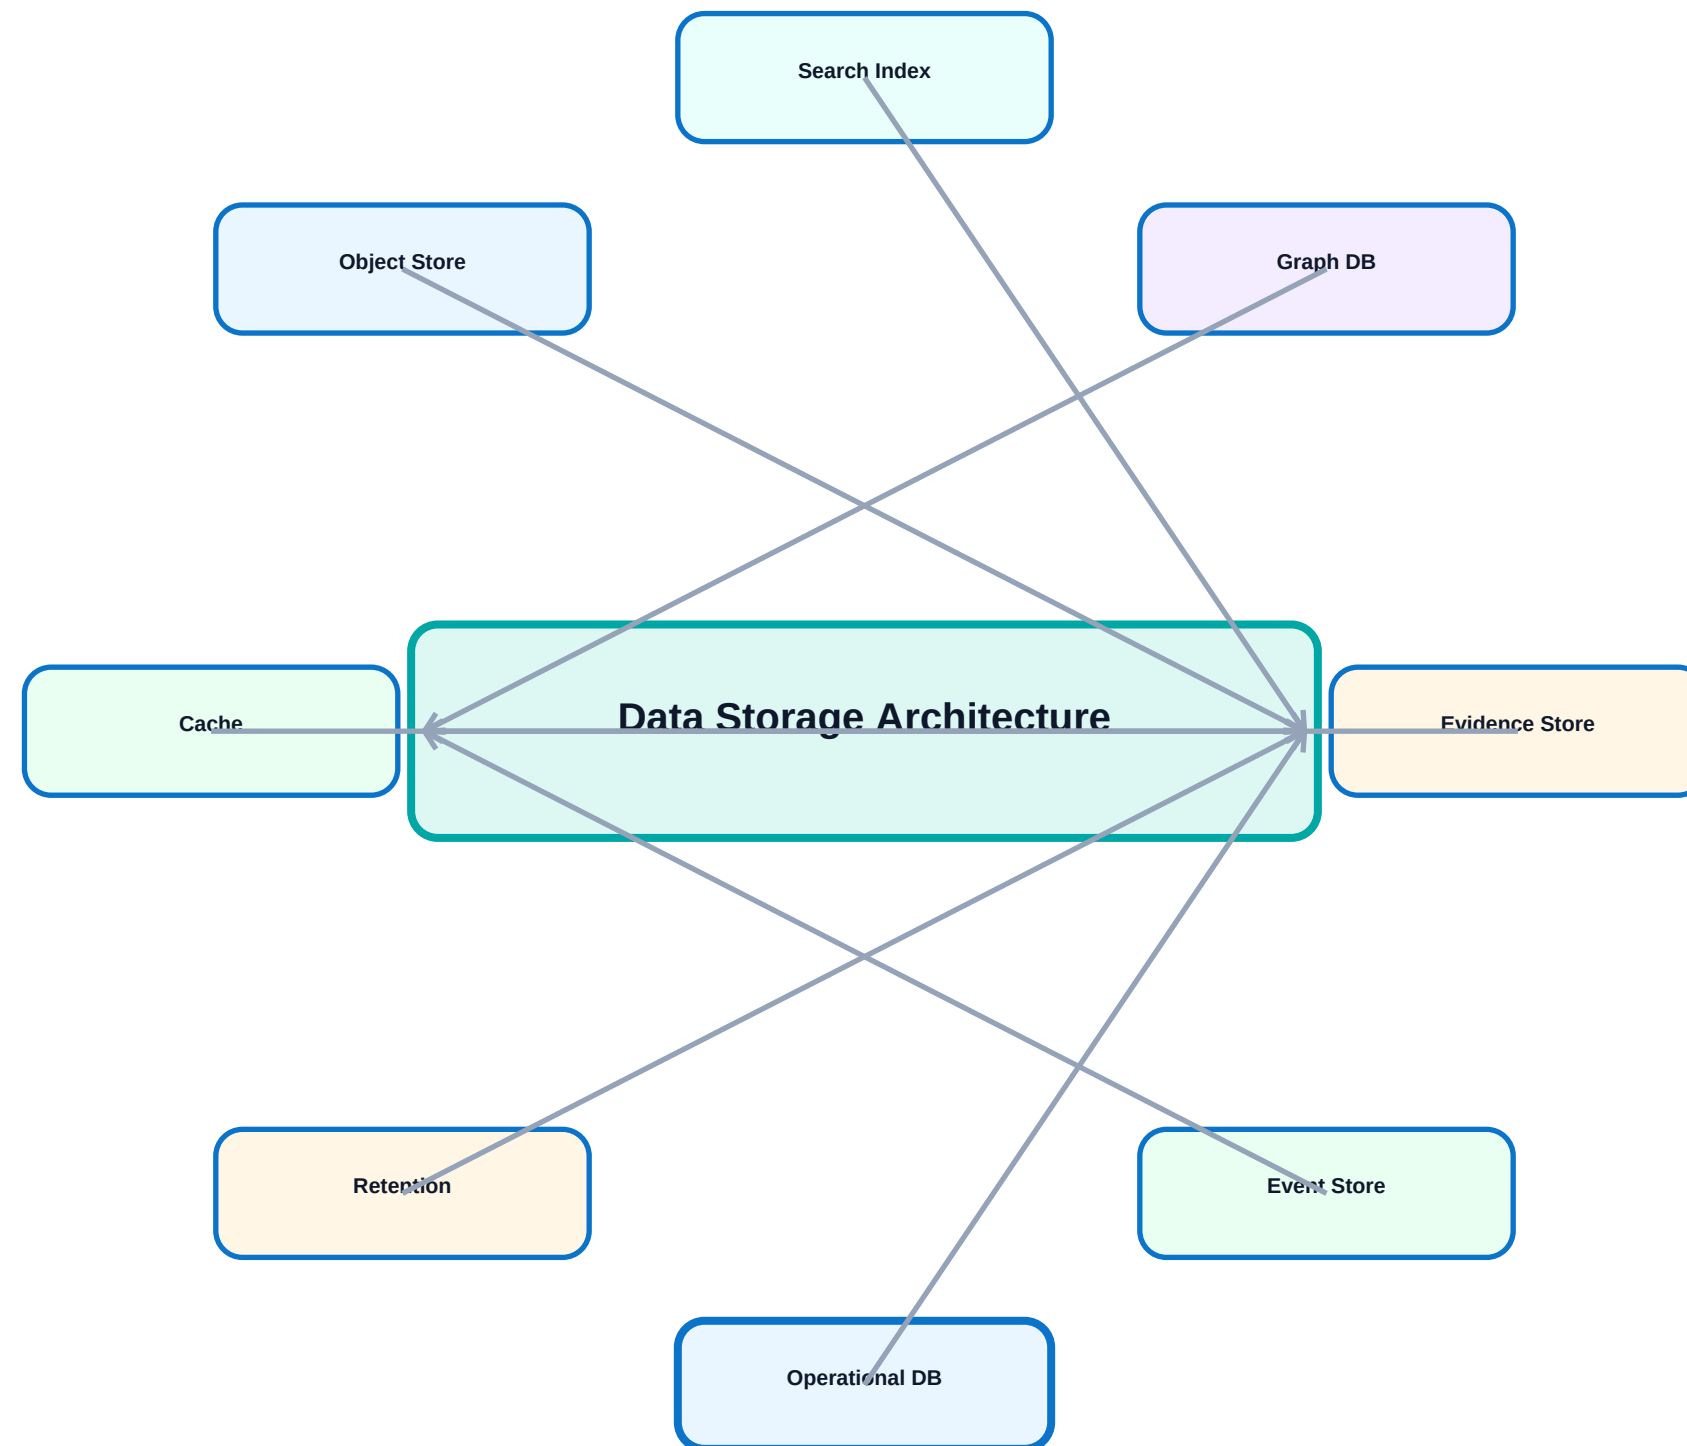

Internal and external API surface for AQELYN services.

Internal and external API surface for AQELYN services.

22 - Data Storage Architecture

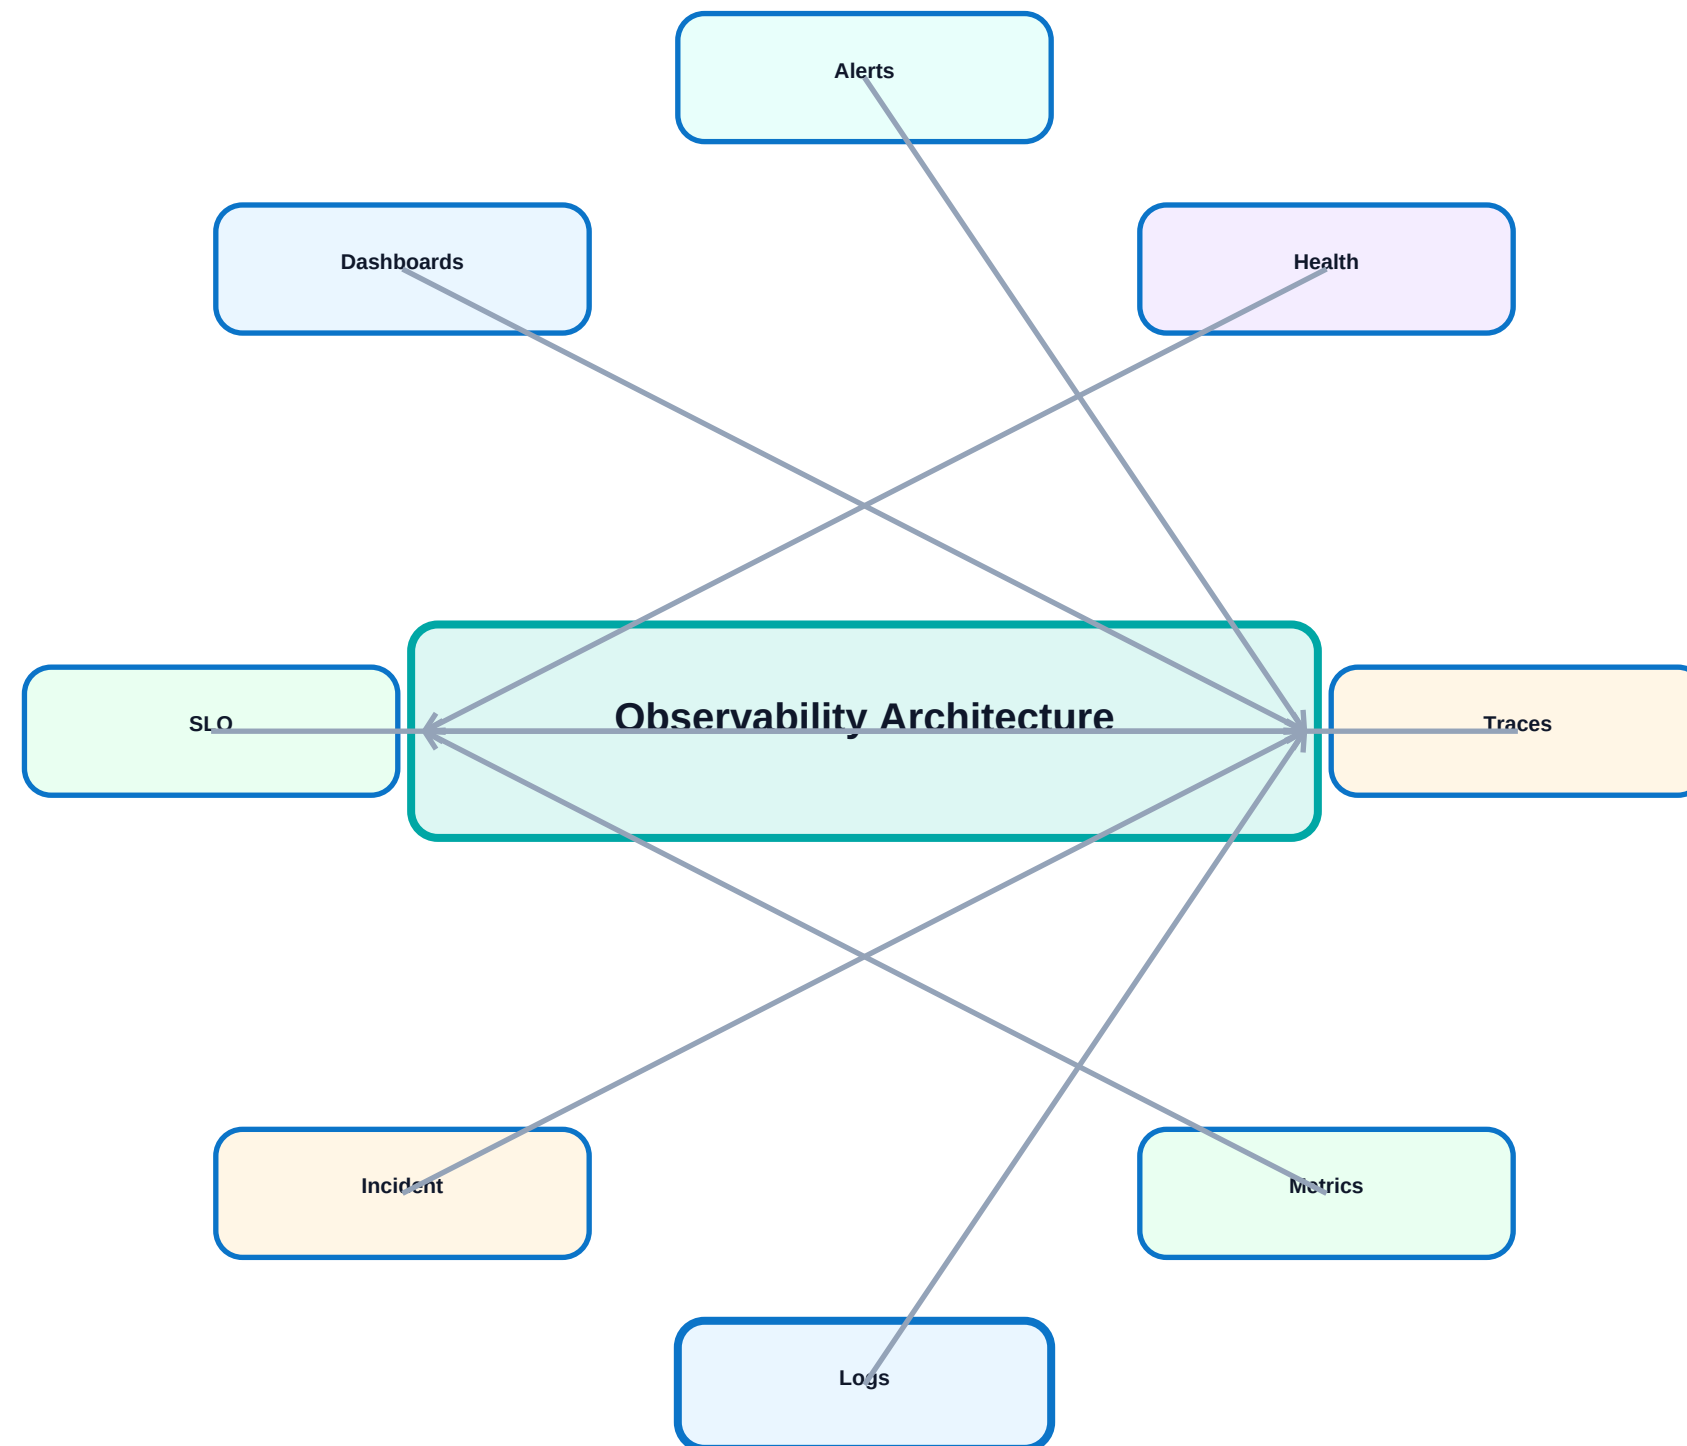

Operational, analytical, evidence, graph, and search stores.

Operational, analytical, evidence, graph, and search stores.

23 - Observability Architecture

Logs, metrics, traces, alerts, and operational dashboards.

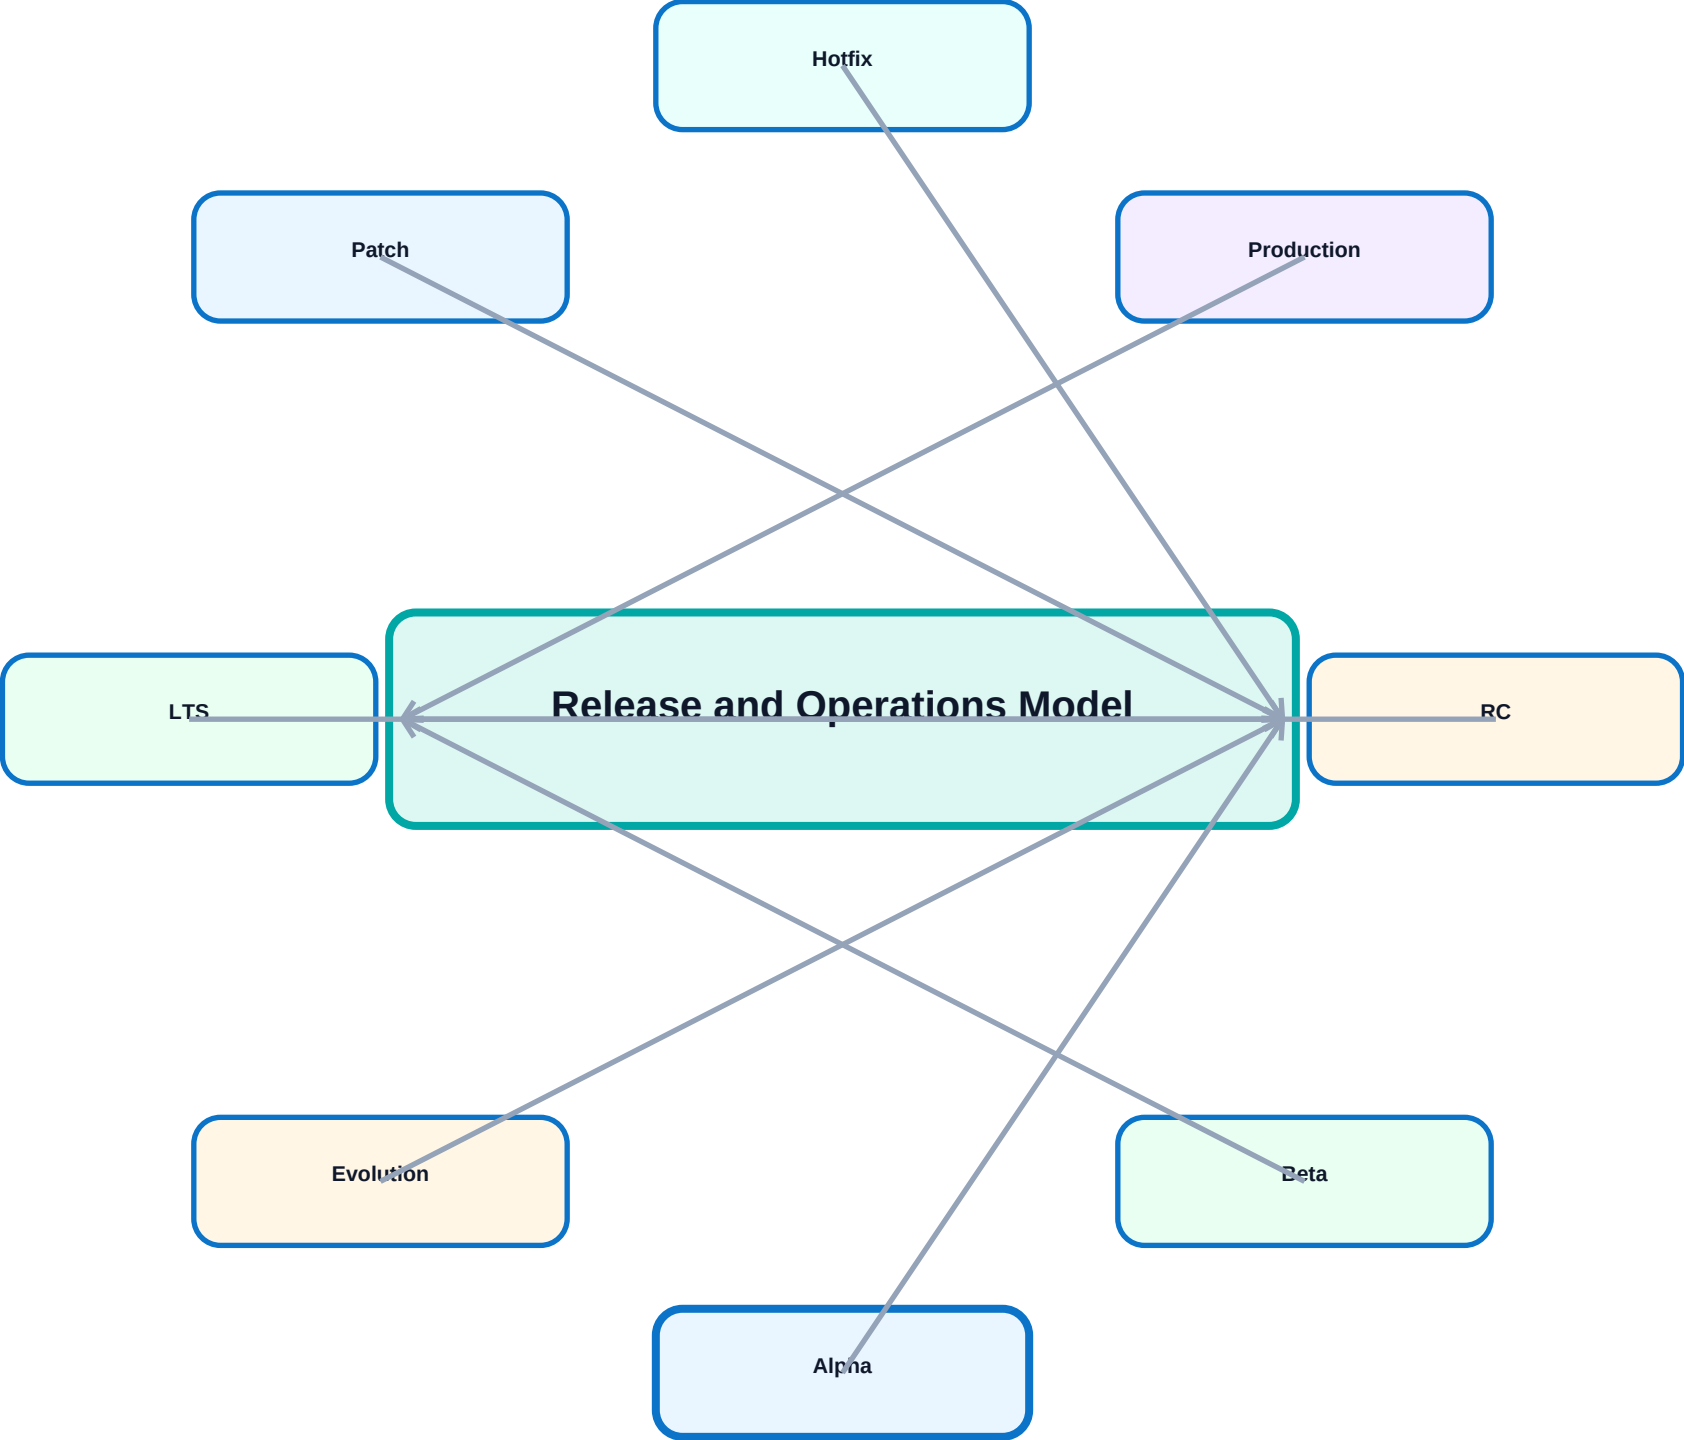

Logs, metrics, traces, alerts, and operational dashboards.

24

24 - Release and Operations Model

Release train from alpha to beta, production, and continuous evolution.

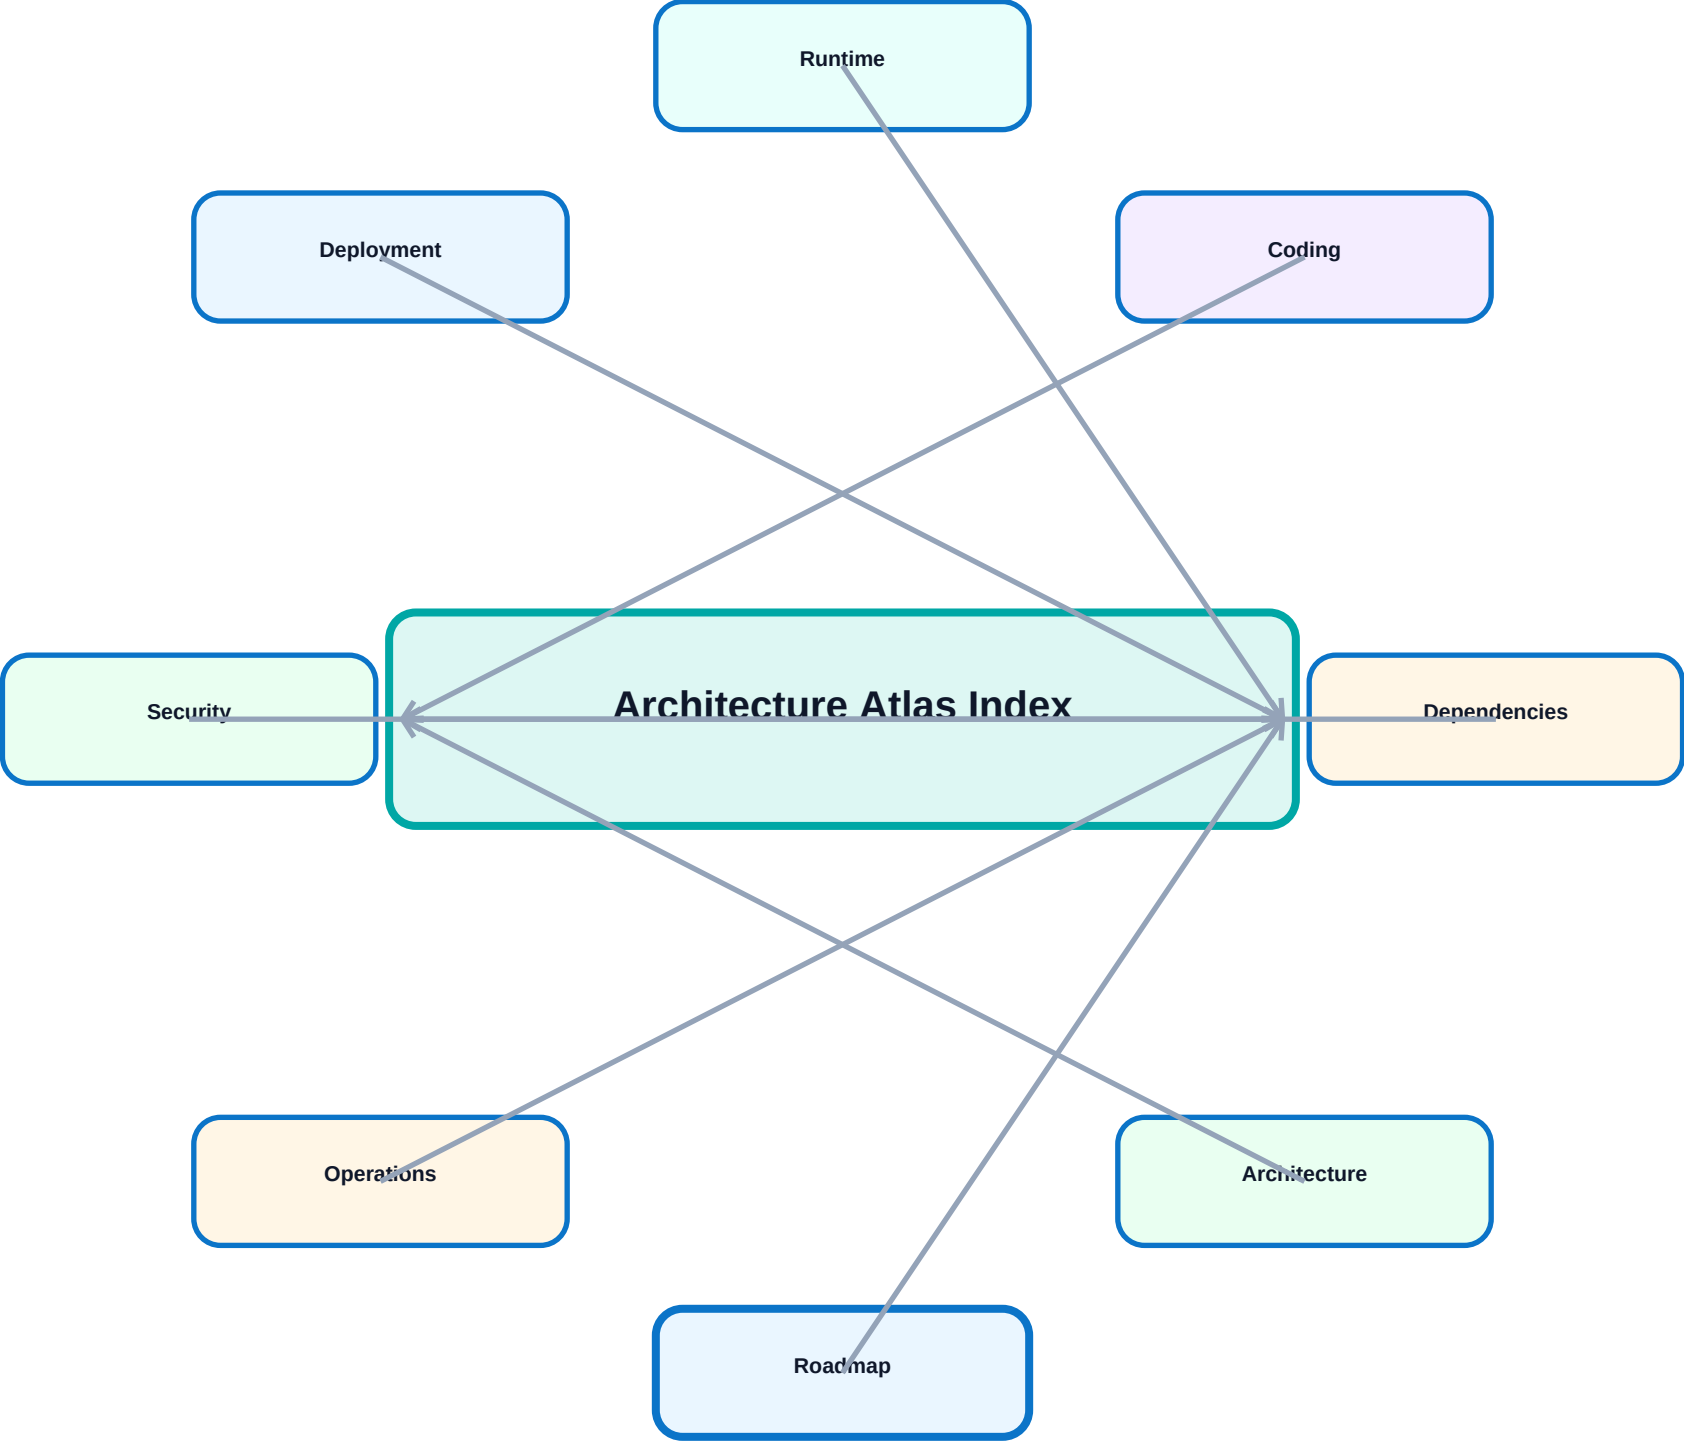

Release train from alpha to beta, production, and continuous evolution.

25

25 - Architecture Atlas Index

Navigation map for the Atlas and coding start.

Navigation map for the Atlas and coding start.
