

IS-002 Sentinel Object System

Implementation Specification IS-002 - Sentinel Object System

Status: Approved for Design

Priority: Critical

Package ID: PKG-002

Depends on: IS-001 Sentinel Kernel

Referenced Blueprint Volumes: 3, 16, 34, 56

Vision

Everything in Project Sentinel is an Object. Devices, users, identities, certificates, applications, missions, findings, evidence, policies, alerts, plugins, workflows and reports use the same universal object model.

Universal Object Structure

Object ID, Object Type, Version, Status, Owner, Organization, Workspace, Labels, Metadata, Created, Updated, Relationships, Evidence, Trust, Permissions, History.

Lifecycle

Created -> Validated -> Active -> Updated -> Archived -> Deleted (logical) -> Purged (policy controlled)

Requirements

REQ-OBJECT-001: Every entity shall inherit from the universal object model.

REQ-OBJECT-002: Every object shall have a globally unique identifier.

REQ-OBJECT-003: Every object shall maintain a complete change history.

REQ-OBJECT-004: Every object shall support relationships.

REQ-OBJECT-005: Every object shall support governance labels.

REQ-OBJECT-006: Every object shall expose lifecycle state.

REQ-OBJECT-007: Every object shall publish lifecycle events.
